第4讲　金融学论文写作过程和训练

王义中
浙江大学经济学院金融系

2016年总书记的讲话：专家学者要立足国情、深入调研，着力研究重大理论问题和现实问题，注重从客观经济事实出发，揭示经济现象背后的本质及规律，努力多出经得起实践检验的研究成果，为经济社会发展献计献策。

九步功法

- 第一步 选题（明确学术研究的三个问题）
- 第二步 找文献
- 第三步 找基本事实（数据等）
- 第四步 处理数据+实证结果
- 第五步 写“理论机制”或研究假说
- 第六步 结论
- 第七步 引言
- 第八步 摘要
- 第九步 参考文献+格式等

第一步 选题

选题（idea）的重要性：研究重要的问题+有趣的问题

- 中英文大期刊上文章的最突出特点：问题很重要或重要问题；国家重大战略问题、重大政策问题等。

HOUSEHOLD DEBT AND BUSINESS CYCLES WORLDWIDE*

ATIF MIAN
AMIR SUFI
EMIL VERNER

An increase in the household debt to GDP ratio predicts lower GDP growth and higher unemployment in the medium run for an unbalanced panel of 30 countries from 1960 to 2012. Low mortgage spreads are associated with an increase in the household debt to GDP ratio and a decline in subsequent GDP growth, highlighting the importance of credit supply shocks. Economic forecasters systematically over-predict GDP growth at the end of household debt booms, suggesting an important role of flawed expectations formation. The negative relation between the change in household debt to GDP and subsequent output growth is stronger for countries with less flexible exchange rate regimes. We also uncover a global household debt cycle that partly predicts the severity of the global growth slowdown after 2007. Countries with a household debt cycle more correlated with the global household debt cycle experience a sharper decline in growth after an increase in domestic household debt. *JEL* Codes: D14, E21, E32, E44, E51, G01.

当前经济金融学研究的几个热点问题

- 二十大报告
- 中央金融工作会议
- 金融支持民意经济
- 产业链风险
- 数字化转型与创新行为
- 企业ESG、投资机构的ESG投资、环境违法违规
- 家庭债务及其影响
- 地方政府债务

				(0.244)	(0.257)
Global Δy_{t-2}				0.390+	0.426*
				(0.224)	(0.189)
Global Δy_{t-3}				0.477+	0.532+
				(0.258)	(0.280)
Sample	Full	Full	Full	Full	Pre-2006
Test for equality of β_{HH} and β_F, p-value			.0072	.0076	.0037
R^2	0.295	0.007	0.295	0.471	0.426
Observations	46	46	46	46	40

Notes. This table reports time series regressions of the sample average real GDP growth from t to $t+3$ on the sample average change in household and firm debt to GDP from $t-4$ to $t-1$. Newey-West standard errors in parentheses are computed with six lags. +,*,** indicate significance at the 0.1, 0.05, 0.01 levels, respectively.

- 全球家庭债务周期：家庭债务对经济增长率有显著负向影响，而公司债务不显著

The VAR in levels with country fixed effects is given by

$$\mathbf{A}\mathbf{Y}_{it} = \mathbf{a}_i + \sum_{j=1}^{p} \alpha_j \mathbf{Y}_{it-j} + \epsilon_{it},$$

where $\mathbf{a}_i$ is a vector of country fixed effects and ϵ_{it} is an $n \times 1$ vector of structural shocks with $\mathrm{E}[\epsilon_{it}\epsilon_{it}'] = I$, $\mathrm{E}[\epsilon_t \epsilon_s'] = 0$ for $s \neq t$, and I is the identity matrix. We set $p = 5$ based on the Akaike information criterion. The reduced form representation can then be written as

$$\mathbf{Y}_{it} = \mathbf{c}_i + \sum_{j=1}^{p} \delta_j \mathbf{Y}_{it-j} + \mathbf{u}_{it}, \quad (1)$$

- 家庭债务增加，在前3年，导致经济增长率上升，而随后显著下降

Stock Market Wealth and the Real Economy: A Local Labor Market Approach†

By Gabriel Chodorow-Reich, Plamen T. Nenov, and Alp Simsek*

We provide evidence of the stock market consumption wealth effect by using a local labor market analysis. An increase in local stock wealth driven by aggregate stock prices increases local employment and payroll in nontradable industries and in total, with no effect on employment in tradable industries. In a model of geographic heterogeneity in stock wealth, these responses imply an MPC of 3.2 cents per year and that a 20 percent increase in stock valuations, unless countered by monetary policy, increases the aggregate labor bill by at least 1.7 percent and aggregate hours by at least 0.7 percent two years after the shock. (*JEL* E21, E24, E52, G12, G51, R22, R23)

Motivated by the model in Section IV, we assume a true data generating process of the form

$$\Delta_{a,t-1,t+h} y = \beta_h \left[S_{a,t-1} R_{a,t-1,t} \right] + \Gamma_h' X_{a,t-1} + \epsilon_{a,t-1,t+h}, \quad (1)$$

- 回归：Y（地区就业和工资）=X（股票市场财富/劳动市场收入，与股票投资组合收益率的交互项）
- **机制**：股票财富增加——较大资本所有权地区，消费（支出）更多——劳动力成本上升，不可贸易品部门劳动力增加

The Cultural Origin of CEOs' Attitudes toward Uncertainty: Evidence from Corporate Acquisitions

Yihui Pan
University of Utah

Stephan Siegel
University of Washington

Tracy Yue Wang
University of Minnesota

We examine the role of cultural heritage in shaping U.S. CEOs' attitudes toward uncertainty, in the context of their corporate acquisition decisions. We find that CEOs with a more uncertainty-avoiding cultural heritage are less likely to engage in acquisitions. Conditional on making an acquisition, uncertainty-averse CEOs prefer targets in familiar industries and targets that can be more easily integrated. The emphasis on cultural identity by CEOs' parents and the ethnic composition of CEOs' early life environment significantly influence the cultural transmission process. Cultural differences about uncertainty attitudes persist over multiple generations, but become less pronounced over time. (*JEL* G34, G4, G40, G41)

Do CEOs Affect Employees' Political Choices?

Ilona Babenko
W. P. Carey School of Business, Arizona State University

Viktar Fedaseyeu
Bocconi University and Belarusian Economic Research and Outreach Center (BEROC)

Song Zhang
Carroll School of Management, Boston College

We study the relation between CEO and employee campaign contributions and find that CEO-supported political candidates receive 3 times more money from employees than candidates not supported by the CEO. This relation holds around CEO departures, including plausibly exogenous departures due to retirement or death. Equity returns are significantly higher when CEO-supported candidates win elections than when employee-supported candidates win, suggesting that CEOs' campaign contributions are more aligned with the interests of shareholders than are employee contributions. Finally, employees whose donations are misaligned with their CEOs' political preferences are more likely to leave their employer. (*JEL* G30, G38, D72, P48)

The Review of Financial Studies

Communication within Banking Organizations and Small Business Lending

Ross Levine
Haas School of Business, University of California, Berkeley

Chen Lin
Faculty of Business and Economics, The University of Hong Kong

Qilin Peng
Faculty of Business and Economics, The University of Hong Kong

Wensi Xie
CUHK Business School, Chinese University of Hong Kong

We investigate how communication within banks affects small business lending. Using travel times between a bank's headquarters and its branches to proxy for the costs of communicating soft information, we exploit shocks to these travel times—the introduction of new airline routes—to evaluate the impact of within-bank communication costs on small business loans. We find that reducing headquarters-branch travel time boosts small business lending in the branch's county. Several extensions suggest that new airline routes facilitate in-person communications that boost small-firm lending. (*JEL* G21, G30, D83, D20, D22)

Article Information

Abstract

This paper identifies how bank branching benefited local economies during the Great Depression. Using archival data and narrative evidence, I show how Bank of America's branch network in 1930s California created an internal capital market that diversified away local liquidity shortfalls, allowing the bank to maintain 49 percent higher credit growth from 1929 to 1933 than competing banks. The bank's presence mitigated cites' property value contractions and strengthened their recovery through 1940. Linked individual data show that the bank's proximity to workers hastened the transition from agricultural employment to human-capital–intensive sectors in the 1930s, generating structural change and higher wages.

大萧条期间，银行分支机构如何使当地经济受益。档案数据等，银行分支机构网络创造了一个“内部资本市场”，缓解了流动性短缺、房产价值降低，增强了经济复苏。

INFLATION EXPECTATIONS AND FIRM DECISIONS: NEW CAUSAL EVIDENCE*

OLIVIER COIBION
YURIY GORODNICHENKO
TIZIANO ROPELE

We use a unique design feature of a survey of Italian firms to study the causal effect of inflation expectations on firms' economic decisions. In the survey, a randomly chosen subset of firms is repeatedly treated with information about recent inflation whereas other firms are not. This information treatment generates exogenous variation in inflation expectations. We find that higher inflation expectations on the part of firms leads them to raise their prices, increase demand for credit, and reduce their employment and capital. However, when policy rates are constrained by the effective lower bound, demand effects are stronger, leading firms to raise their prices more and no longer reduce their employment. *JEL* Codes: E02, E03.

> With nominal short-term interest rates at or close to their effective lower bound in many countries, the broader question of how expectations are formed has taken on heightened importance. Under such circumstances, many central banks have sought additional ways to stimulate their economies, including adopting policies that are directly aimed at influencing expectations of future interest rates and inflation. —JANET YELLEN (2016)

> When we are at practically zero nominal rates, the real rates are being driven by the expectation of inflation. So lower expectations of inflation imply higher real rates . . . that's why we fight negative expectations of inflation. —MARIO DRAGHI (2015)

> The first element [of QE] was to dispel people's deflationary mindset and raise inflation expectations. —HARUHIKO KURODA (2014)

*The authors did not receive outside funding for this research. THE DEPOSITS CHANNEL OF MONETARY POLICY*

ITAMAR DRECHSLER
ALEXI SAVOV
PHILIPP SCHNABL

We present a new channel for the transmission of monetary policy, the deposits channel. We show that when the Fed funds rate rises, banks widen the spreads they charge on deposits, and deposits flow out of the banking system. We present a model where this is due to market power in deposit markets. Consistent with the market power mechanism, deposit spreads increase more and deposits flow out more in concentrated markets. This is true even when we control for lending opportunities by only comparing different branches of the same bank. Since deposits are the main source of liquid assets for households, the deposits channel can explain the observed strong relationship between the liquidity premium and the Fed funds rate. Since deposits are also a uniquely stable funding source for banks, the deposits channel impacts bank lending. When the Fed funds rate rises, banks that raise deposits in concentrated markets contract their lending by more than other banks. Our estimates imply that the deposits channel can account for the entire transmission of monetary policy through bank balance sheets. *JEL* Codes: E52, E58, G12, G21.

I. INTRODUCTION

We propose and test a new channel for the transmission of monetary policy, the deposits channel. We show that when the Fed funds rate rises, banks widen the interest spreads they charge on deposits, and deposits flow out of the banking system. Since banks rely heavily on deposits for their funding, these outflows induce a contraction in lending. The relationships we document are strong

Article Information

Abstract

The homes of firm owners are an important source of finance for ongoing businesses. We use UK microdata to show that a £1 increase in the value of the homes of a firm's directors increases the firm's investment by £0.03. This effect is concentrated among firms whose directors' homes are valuable relative to the firm's assets, that are financially constrained, and that have directors who are personally highly levered. An aggregation exercise shows that directors' homes are as important as corporate property for collateral driven fluctuations in aggregate investment demand.

SUPPLY CHAIN DISRUPTIONS: EVIDENCE FROM THE GREAT EAST JAPAN EARTHQUAKE*

VASCO M. CARVALHO
MAKOTO NIREI
YUKIKO U. SAITO
ALIREZA TAHBAZ-SALEHI

Exploiting the exogenous and regional nature of the Great East Japan Earthquake of 2011, this article provides a quantification of the role of input-output linkages as a mechanism for the propagation and amplification of shocks. We document that the disruption caused by the disaster propagated upstream and downstream along supply chains, affecting the direct and indirect suppliers and customers of disaster-stricken firms. Using a general equilibrium model of production networks, we then obtain an estimate for the overall macroeconomic impact of the disaster by taking these propagation effects into account. We find that the earthquake and its aftermaths resulted in a 0.47 percentage point decline in Japan's real GDP growth in the year following the disaster. *JEL Codes:* D57, E32, L14, Q54.

IV.A. Empirical Specification

Using our measure of network distance constructed from TSR data, we estimate the following difference-in-differences specification:

$$
\begin{aligned}
y_{ipst} = \gamma_i + \gamma_{pst} &+ \sum_{k=1}^{4} \sum_{\tau \neq 2011} \beta_{k,\tau}^{\text{down}} \times \text{Downstream}_i^{(k)} \times \text{year}_\tau \\
&+ \sum_{k=1}^{4} \sum_{\tau \neq 2011} \beta_{k,\tau}^{\text{up}} \times \text{Upstream}_i^{(k)} \times \text{year}_\tau \\
&+ \sum_{\tau \neq 2011} \delta_\tau \times \boldsymbol{X}_{isp,2010} \times \text{year}_\tau + \varepsilon_{ispt}, \qquad (1)
\end{aligned}
$$

上游供应商-地震中心企业-下游客户

- **好的题目如何产生的？**有一定的经济学和金融学逻辑思维（理论框架），有一定的文献基础，有一定的实践经验。
- 纯粹的理论研究和方法论研究，有一定的挑战力。
- 实证研究最好是“热点问题”，国家、区域和政策等层面都关注的问题。
- 找导师申请题目……
- 紧跟时代脉搏研究中国问题，讲好中国故事

如何取题目？

一、题目：四川省普惠金融发展水平对农村减贫效应影响的研究↵

二、指导教师对文献综述和开题报告的具体要求：↵

改为：普惠金融发展对农村减贫效应研究-以四川省为例。实证分析+案例分析

基于机器学习的我国中央银行货币政策研究

一、题目：《基于机器学习的我国中央银行货币政策研究》

二、指导教师对文献综述和开题报告的具体要求：

问题：题目太大，与研究内容不一致。改为：基于机器学习的央行沟通对股票收益率的影响研究

一、题目：浙江省农村金融发展对农民收入增长的影响研究——基于2008—2022年数据的实证分析

二、指导教师对文献综述和开题报告的具体内容要求

改为：农村金融发展对农民收入增长的影响研究-以浙江省为例。实证分析+案例分析

浙江大学本科生毕业论文（设计）

一、题目：风险事件中企业ESG表现的效应研究

二、指导教师对文献综述、开题报告、外文翻译的具体要求

问题：题目与研究内容不一致，不明确、不聚焦。改为：新冠疫情冲击、企业ESG表现与股票超额收益率：基于上市公司的经验证据

- 员工持股计划对高技术型企业专利创新的影响——基于风险承担的视角
- 我国能源行业中公司ESG整合对企业绩效的影响
- 家族企业多元化决策背后的传承需求
- 国企激励制度和行为的演变
- 激进还是保守：薪酬激励如何影响离职意愿和风险承担——基于公募基金限薪令的准自然实验
- 员工持股计划对企业创新的影响——基于风险承担的视角
- 公司ESG整合对企业绩效的影响研究
- 传承需求对家族企业多元化决策的影响研究
- EVA考核对国有企业绩效的影响研究
- 薪酬激励对公募基金风险承担行为的影响研究-来自限行令的准自然实验

如何讲好中国故事

- 身在中国，熟悉中国制度环境，研究中国问题具有优势；与成熟国家的公司比较，反思借鉴。
- 要重视实践，重视中国的制度背景、中国的特色；要尊重历史事和基本事实。
- 要兼容并蓄，不能完全照搬西方理论和实践（熔断机制）。中国故事是基于中国经验的故事，是好的故事。例如，习近平新时代中国特色社会主义思想、双轨制、中国金融体系和治理、地方政府的作用等。

- Political Incentives to Suppress Negative Information Evidence from Chinese Listed Firms（JAR，2015）
- 中国共产党全国代表大会，“讲政治”，上市公司对政治事件更敏感，公司减少或者不发布负面消息，反映在股价上的是，公司股价崩溃（stock price crash）的概率大大降低。
- 可能存在的问题：所有分析假设媒体愿意发布负面消息，而公司不愿意发布。

- **理解中国特色的金融体系**
- 国有企业是平台，是生产组织者，其上下游有大量民营企业
- 中国式普惠金融：不能仅从股权结构或股东构成，判断该金融机构是否是民营金融机构，而要从真正公司治理的角度看其性质；融入社会治理
- 金融监管和治理：维护金融稳定性，防范系统性金融风险，确保金融安全，远超过金融创新
- 金融功能性：保持国家对金融业的控制力，因为金融需求（老百姓的投融资、存贷款、资金交易、结算等），与水、电、交通运输、国防、粮食、网络等关乎国计民生，是生存基本需求

第二步 找文献

文献为什么很重要？

找文献读文献=学术研究的生存基础，

写文章发文章=学术研究的生存资本

- 同样是研究中国金融问题，为什么有些能够国际顶尖期刊发表，而且主要是在国外获得博士学位为主的研究者发表。差别在于没有一个好的学术思维逻辑，而好的学术思维逻辑来自哪里？答案：读文献
- 精读文献的好处—形成学术思维逻辑—掌握写作技巧—学习写作方法—模仿写作形式
- 读了多少质量高的文献，接受了学术训练，懂得了写作技巧和形式，形成了良好的学术思维逻辑能力
- 实际部门工作不需要读文献？

- 理解文献
- 文献构成
  - 经典文献。教科书里提到的理论；文献里引用率高的文献；经济学大家写的文章
  - 前沿文献。权威期刊的发表的学术论文（AER、JPE、QJE、EN、JF、JFE、RFS、RES）。NBER、SSRN工作论文。

- 阅读文献
- 精读文献。精读就是每句话、每个公式、每个计算、每张表格、每个结论都能理解，而且在讲解的时候让别人能理解。精读文献以前沿文献为主，一定需要弄清楚文中的所有细节。而且以经典文献为辅。精读文献的具体要求：

- 需要每个字每个读，弄懂每一句话。
- 需要将文章的公式仔细推导。
- 结合相关资料，比如当读“Efficient Capital Markets”这篇文章时，看看关于有效市场性假说的其相关文献和资料，需要将该理论弄懂，彻底透彻
- 每篇文章需要双面打印，并在上面做阅读笔记。

- 泛读文献。在具体写文章过程中需要泛读文献，精读核心参考文献。
- 讲解文献
- 重点理解：X和Y 分别是什么？为什么X影响Y?
- 文章的问题是如何提出的；文章的研究思路；文章的贡献（或与既有文献的差别）。
- 追踪文章中提到的文献，讲解这些文献的核心思想，以及与所讲解文章之间的联系。
- 变量衡量、数据说明
- 计量模型与计量分析过程

写文献综述

- 不能复制、粘贴别人文章或者网络上的内容，更不能将这些内容放在学术论文中。否则，就是学术不端。
- 写学术论文过程中，除几篇核心文章需要精读外，其他文献不需要精读。
- 看文献，总结文献观点，并建立不同文献之间的联系，并加上引用，附在参考文献里。这就是规范的、严肃的学术研究，也是逻辑思维能力不断建立的过程。

- 按文献相关程度分类。例如，关于绿色金融创新的相关文献
- 不要按国内外分类
- 不要简单罗列。例如，张三（2002）认为……；王五（2003）认为……；李四（2004）认为……
- 写文献综述，要归纳总结。对于信用等级的评测能力超过征信数据（吴晓灵等，2021）

- Trust as an Entry Barrier: Evidence from FinTech Adoption （JFE，2025）
- 近年来，金融科技贷款在信贷市场中的份额不断扩大，与银行贷款形成了一定的竞争，并取代了银行的一部分信贷市场份额。在美国，金融科技抵押贷款的信贷市场份额从2010年的2%上升到了2016年的8%。但是，目前学界对于金融科技公司与银行的竞争机制，尚未形成充分的认知。
- 关注“信任”这一金融学术界已有较多研究的竞争影响因素，主要研究借款人对银行的信任是如何影响银行与金融科技公司之间的信贷竞争的，并发现借款人对银行的信任度下降，是推动借款人从银行贷款转而选择金融科技贷款的重要因素。

- 采用双重差分法（DiD），选用富国银行丑闻事件作为借款人银行信任度的负面冲击事件，分析该事件前后借款人从银行贷款转而选择金融科技贷款。2016年富国银行丑闻，员工在未获得客户同意，私自开设了约200万至350万个虚假账户，包括汽车保险、信用卡和储蓄账户等，导致客户被收取非法费用。

$$y_{(i),c,t} = \beta WFExposure_c \times Post_t + Control_{(i),c,t} + \lambda_c + \delta_t + \varepsilon_{(i),c,t}$$

- Y: 贷款人对银行的信任度，为虚拟变量，采用2012年6月-2021年6月Gallup调查数据，受访者在该调查中表示对银行持有“极大程度”或“相当程度”信心时赋值100。
- X: WFExposure指富国银行丑闻暴露程度，具体通过2015年在c县的富国银行存款市场份额衡量；Post为虚拟变量，2016年（丑闻曝光时间）后取值为1。
- 第二步验证富国银行暴露程度（WFExposure）（实际上是反映借款人对银行的信任度）与借款人从银行贷款转而选择金融科技贷款的因果关系：Y为虚拟变量，贷款人为金融科技公司时，取值为100；县级层面分析中，y为金融科技贷款机构t年在c县的抵押贷款份额。X不变。

ABSTRACT

This paper studies the role of trust in incumbent lenders (banks) as an entry barrier to emerging FinTech lenders in credit markets. The empirical setting exploits the outbreak of the Wells Fargo scandal as a negative shock to borrowers' trust in banks. Using a difference-in-differences framework, I find that increased exposure to the Wells Fargo scandal leads to an increase in the probability of borrowers using FinTech as mortgage originators. Utilizing political affiliation to proxy for the magnitude of trust erosion in banks in a triple-differences specification, I find that, conditional on the same exposure to the scandal, a county experiencing a greater erosion of trust has a larger increase in FinTech share relative to a county experiencing less of an erosion of trust. Estimating treatment effect heterogeneity using generic machine learning inference suggests that borrowers with the greatest decrease in trust in banks and the greatest increase in FinTech adoption have similar characteristics.

1. Introduction

Financial Technology (FinTech) has been increasingly replacing bank lending in credit markets. In the U.S., the market share of FinTech mortgage lending increased from 2% in 2010 to 8% in 2016. FinTech lenders provide efficient and convenient services to borrowers. They use machine learning techniques to process online loan applications, largely reducing processing time compared to traditional banks. Moreover, the increasing growth of FinTech firms competes with bank lending, affecting overall credit market conditions and credit accessibility.[2] However, FinTech adoption is not universal. Different local residential mortgage markets have immensely different FinTech adoption rates. The ability of FinTech lenders to effectively compete against banks is not well understood. What are the factors that affect the competition between banks and FinTech lenders?

This paper studies trust in the incumbent lenders (banks) as a potential entry barrier to FinTech lenders. Trust is at the heart of every economic transaction (Arrow, 1974; Tirole, 2017). Guiso et al. (2008) define trust as an individual's subjective belief of the probability of being cheated. Gennaioli et al. (2015) think of trust as inducing a tighter, or lower volatility of, perceived distribution of financial returns. Both these two aspects of trust could serve as the underlying mechanisms through which trust affects borrowers' choice of FinTech lenders. More trust placed on FinTech lenders could indicate that FinTech lenders have a lower perceived probability of cheating. Borrowers could also choose FinTech lenders because trust in FinTech lenders tightens the perceived distribution of the probability of being cheated. Therefore, the role of trust may not be absolute but relative. Households need to use intermediaries to transact, even if they trust them very little. As a

et al. (2019) find no correlation between improved internet access and FinTech adoption. Previous research studies the differences in cost of capital (Thakor and Merton, 2018; Donaldson et al., 2019) and the differences in regulatory burden (Buchak et al., 2018; Chrétien and Lyonnet, 2021) between banks and non-bank lenders. Buchak et al. (2018) and Fuster et al. (2019) have documented, the relative convenience of online lenders matters for FinTech adoption. My paper is the first to study and empirically identify the role of trust in banks as an entry barrier affecting the competition between banks and FinTech lenders. The paper also rules out the potential convenience channel.

Recent studies in FinTech examine how FinTech adoption affects overall credit market conditions and credit accessibility. Several papers focus on identifying the types of borrowers FinTech lenders lend to and examine whether FinTech lenders extend credit to under-served borrowers (e.g., Tang, 2018; Di Maggio and Yao, 2020; De Roure et al., 2021). My paper sheds light on cross-regional differences in FinTech adoption, suggesting that lack of trust from potential borrowers could affect FinTech lenders' credit expansion.

This paper also contributes to the literature that documents the role of trust in finance, pioneered by Guiso et al. (2004), who show that social capital plays a vital role in financial development. Researchers have examined the role of trust in the stock market (Guiso et al., 2008; Giannetti and Wang, 2016), credit market (Brown et al., 2019; Thakor and Merton, 2018), financial advisory market (Gennaioli et al., 2015; Gurun et al., 2018), and contract design (D'Acunto et al., 2020; Gennaioli et al., 2022). This paper highlights trust in traditional financial intermediaries such as banks as an entry barrier to financial innovation.

Finally, this paper contributes to the use of machine learning in finance. The recent literature at the intersection between econometrics and machine learning has developed several applications of using machine learning for causal inference, especially for heterogeneous treatment effects estimation (e.g., Athey and Imbens, 2016; Athey and Wager, 2019; Chernozhukov et al., 2020). This paper designs an empirical framework that uses a generic machine learning method in a difference-in-difference setup. By estimating the average characteristics of the most and least treated groups and comparing the differences in the average characteristics for different outcome variables, the research design can be applied for studying the underline mechanisms of a quasi-experiment.

2. Data description

of customer lender interaction. Some anecdotal evidence also suggests that lender which employ the online lending platform are also likely to use more advanced technology to screen and monitor borrowers.

Through the adoption of full-scale online lending technology initiated by mortgage companies, such as, Quicken Loan's Rocket Mortgage, it is possible that some banks also provide some level of online mortgage origination services. No bank falls into my strict definition of FinTech in my sample. However, some banks are adopting more customer-lender interaction than others. More information can be uploaded and processed on their website than on other banks. I classify banks with a high degree of automation in their online mortgage application process as "online" banks.[4]

The definition is consistent with Buchak et al. (2018)'s FinTech classification, which can be downloaded from their website.[5] One caveat is that some companies classified as non-FinTech lenders in 2017 could fit into the definition of FinTech lender in 2019. Though such transition may correlate with trust erosion in banks, I do not classify these lenders as FinTech in the primary analysis mostly because it was only indirectly affected by the scandal.

Define FinTech adoption. County-level FinTech adoption is measured as the share of mortgage loans handled by FinTech lenders.

$$\text{FinTech adoption}_{ct} = \frac{\sum_{i \in \text{FinTech}} \text{Num of Loans}_{ict}}{\sum_{i \in \text{All Lenders}} \text{Num of Loans}_{ict}}$$

The number of mortgage loans can be defined as either the number of loan originations or the number of total loan applications. The number of total applications reflects households' demand for FinTech services, whereas the number of originated loans reflects supply and demand equilibrium results. Both measures are essential when examining FinTech adoption. FinTech adoption measured using total applications allows researchers to assess household demand and how trust affects household demand for FinTech. FinTech adoption measured using originated loans directly measures the actual degree of FinTech adoption, which matters for welfare analysis (see Fig. 1). These two measures respond to different perspectives of the same question; I will use both in my analyses. If the supply of FinTech loans is elastic, these two measures should produce similar results. Similar results using total loan amount instead of total number of loans are provided in the appendix.

ABSTRACT

This paper introduces a real-time, continuous measure of national sentiment that is language-free and thus comparable globally: the positivity of songs that individuals choose to listen to. This is a direct measure of mood that does not pre-specify certain mood-affecting events nor assume the extent of their impact on investors. We validate our music-based sentiment measure by correlating it with mood swings induced by seasonal factors, weather conditions, and COVID-related restrictions. We find that music sentiment is positively correlated with same-week equity market returns and negatively correlated with next-week returns, consistent with sentiment-induced temporary mispricing. Results also hold under a daily analysis and are stronger when trading restrictions limit arbitrage. Music sentiment also predicts increases in net mutual fund flows, and absolute sentiment precedes a rise in stock market volatility. It is negatively associated with government bond returns, consistent with a flight to safety.

- 老问题（投资者情绪对股市的影响），新指标（Music Sentiment）
- 基准回归方程：

$$RET_{i,t} = \alpha + \beta_1 * Music\ Sentiment + \sum \Gamma * Controls_{i,t} + \varepsilon_{i,t}$$

- Y：RET 是某国股票市场指数的每周回报率
- X：Music Sentiment
  - 研究一个国家公民所听歌曲的情感。基于心理学文献，即个人会在他们的音乐选择中反映他们的情绪。
  - 使用 40 个国家在 Spotify（在线音乐平台）上播放的每日前 200 首歌曲的效价（平台提供，衡量一首歌的感情色彩的指标）衡量其公民的情绪，按播放次数加权。

- 疑问1：年龄信息主要来源于Spotify账户注册时用户自己填写。有这个音乐账号的人群基本都在20多岁到40多岁的人群，文章认为人群具有代表性，但没有直接证据证明拥有证券账户的占比。
- 疑问2：注册平台用户中有多少用户每天或者每周进行股票交易？
- 疑问3：投资者情绪影响收益率，还是收益率影响音乐情绪？可以增加调查研究，访谈。
- 疑问4：每个人的音乐偏好有一定“沉淀性”，很长时间很难变化。
- 疑问5：不同国家的投资者结构比例差异大，机构投资者比重的国家，散户投资者情绪预计影响不大。

- 本文研究信任在借款人选择银行或金融科技贷款中的作用，但事实上信任因素很可能是通过改变借款人未实际作出的选择来发挥作用的，而本文却未能考虑这种情形，因此在论证上是不够合理和充分的。
- 本文未考虑的一种重要情形是，借款人在富国银行丑闻发生前愿意选择富国银行或已经在向富国银行申请贷款但尚未审批完毕，而富国银行丑闻曝光后，上述借款人不再愿意选择富国银行或中止了对富国银行的贷款申请。这类情形在现实中可能广泛存在，并且是信任机制的重要部分，而本文却无法考察这种情形。事实上，本文只能考察富国银行丑闻前已经选择富国银行贷款、而丑闻后不再选择的借款人这类情形。因此，本文的对信任作用的考察，是不够充分的。

- **本文并未考察富国银行在丑闻前后的存款规模变化，若丑闻前后未出现存款抽离现象，很可能无法证明该丑闻真正影响了借款人对富国银行的信任，本文对信任作用的论证也就无从谈起。**一般认为，存款是比贷款更能反映客户对银行信任度的因素。因此，如果借款人在内的客户不再信任富国银行，那么很可能会出现抽离富国银行存款的情况，导致富国银行存款规模下降。本文不仅没有直接考察富国银行是否在丑闻后出现了存款规模下降，还在稳健性检验部分得出了一些和上述情形相悖的结论（如下图所示）：即富国银行丑闻前在某县的存款市场份额（WFExposure）和富国银行存款规模的回归系数为正，说明富国银行只要丑闻前在各地的存款市场份额越高，后续存款规模还能更高，与客户不再信任银行后可能抽离存款的情形不一致。这说明本文未充分论证富国银行丑闻是否真正动摇了客户信任，如果客户并未抽离存款，则无法说明富国银行的公众信任度受到了影响，本文的研究结论也将受到根本性冲击。

	(−0.5)	(17.5)	(−3.2)	(0.6)	(1.3)	(−2.2)
County Char.	Yes	Yes	Yes	Yes	Yes	Yes
County FE	Yes	Yes	Yes	Yes	Yes	Yes
Year FE	Yes	Yes	Yes	Yes	Yes	Yes
Observations	8194	8194	8194	8194	8194	8194
Adjusted R^2	0.994	0.872	0.994	0.874	0.710	0.911

- **从富国银行丑闻的具体情况来看，似乎并不能严重影响客户对富国银行的信任，也就无法支撑本文的研究。**本文对富国银行丑闻的具体情况作了介绍，该丑闻主要是未经客户许可开办账户、强制搭售、违规收费等，对客户的损害似乎不够严重，可能无法让客户感受到不安。因此，丑闻对借款人信任的影响可能并不像本文认为的这么严重，后果有可能主要限于银行缴纳罚金，这就无法支撑本文的研究结论。

- **本文认为信任是影响借款人从银行转而向金融科技公司贷款的重要因素，这一观点和直观认知存在一定矛盾，即借款人多数情况下并不太关心银行本身是否安全和值得信任，而只关心银行是否提供自己符合需求的贷款。**借款人尤其是中小借款人，主要关心的是能否取得合适的贷款，而不是银行是否安全和值得信任。相比之下，存款人才会十分关注银行是否安全和值得信任。可见，从直观上看信任似乎不是借款人选择何种金融机构申请贷款的主要因素。因此，本文的研究结论尽管符合学术研究规范，但有些不太符合直观常识和事实。

- **Refinancing Risk and Cash Holdings，*The Journal of Finance*，2014.**

- 公司再融资面临着风险（银行可能不继续提供贷款、或企业很难从外部获得融资），所以增加现金持有量 以应对可能的风险。
- 因果：因变量Y为公司现金持有量，主要解释变量X 为公司再融资风险。
- 事实：1年期、3年期和5年期到期债务比例上升（即 再融资风险），而现金持有量也上升

- 基于描述性统计的典型事实：长期债务比例下降，3年内和5年内到期的长期债务比例上升，然而，现金持有量上升

The Review of Financial Studies

The Effects of Macroeconomic Shocks: Household Financial Distress Matters

José Mustre-del-Río
Federal Reserve Bank of Kansas City, United States

Juan M. Sánchez
Federal Reserve Bank of St. Louis, United States

Ryan Mather
University of Wisconsin, United States

Kartik Athreya
Federal Reserve Bank of New York, United States

When a macroeconomic shock arrives, variation in household balance sheet health (captured by the presence of financial distress, or "FD") leads to differential access to credit and hence a distribution in consumption responses. As we document, though, over the past two recessions, households in prior FD also experienced macroeconomic shocks more intensely than others, leading to a distribution of shock severity. Quantifying the importance of each dimension of heterogeneity (FD or shock severity) for consumption requires a structural model. We find that heterogeneity in FD matters more for shaping the responses of individual and aggregate consumption to shocks. (*JEL* D31, E21, E44, G11,

- 当发生宏观经济冲击，家庭资产负债表健康状况的差异（是否存在财务困境FD衡量）会导致信贷获取能力的不同，从而产生消费反应的差异。过去两次经济衰退中，先前处于FD状态的家庭也比其他家庭更强烈地经历了宏观经济冲击。
- 基本事实——理论模型

savings patterns from Swedish households. Mustre-del Río (2015) finds that substantial dispersion in the disutility of work is needed to match dispersion in labor supply across individuals that cannot be explained by wage differences alone. Finally, Gregory, Menzio, and Wiczer (2021) also find evidence of substantial heterogeneity across workers using data from the Longitudinal Employer-Household Dynamics (LEHD) data set. Compared to those papers, we show how data on FD and homeownership identify a correlation between discount factors and preference for homeownership that shapes the predictions of poverty in response to house-price and income shocks.

1. Evidence

1.1 Why FD as a measure of vulnerability

In this section, we motivate household FD as a useful and timely measure of financial vulnerability. We define FD as a case when an individual has a credit card account at least 30 days delinquent at some point during the year (i.e., *DQ30*). We also present some results for an alternative definition of FD, *CL80*, which is a case when an individual has reached at least 80% of their credit limit over the same time interval.[7] As seen below, our main empirical results are robust to either definition of FD. However, in the quantitative analysis of the subsequent sections, we focus on the DQ30 version as it is most easily defined in our model.

Either FD definition is easily measured, timely, and encompassing. They are easily measured because they are built with the New York Fed Consumer Credit Panel (NY FED-CCP), which contains credit reports for millions of Americans. This also makes them timely because the NY FED-CCP updates the information needed to construct them quarterly and releases it a few days after the end of the quarter. These variables are encompassing because, unlike other measures, neither requires knowledge of the items on an individual's balance sheets or of the prices needed to compute net worth or leverage, among other measures. Moreover, even a near-perfect knowledge of household or individual net wealth may not accurately represent vulnerability. For example, individuals with low levels of net worth may not be constrained.[8] By contrast, seeing an individual become significantly delinquent or utilizing most, if not all, unsecured credit is more telling. Given the costs associated with these actions, it is unlikely that the individuals who take them are unconstrained.

FD is also a valuable measure to observe because it has a relatively high incidence and is very persistent over the life cycle. Figure 1 is a modified

toward debt and repayment, which are crucial to determining the consumption response to shocks.

1.2 FD and its correlation with the size of shocks

Having defined FD and shown its usefulness as an individual measure of vulnerability, this section documents the correlation between FD and aggregate shocks over the past two recessions. Unfortunately, there is no single data source for individual-level data on FD, employment (or income), or wealth. We circumvent this issue by aggregating our individual-level data on FD to the ZIP code or county level and merging it with other data sources aggregated to that same level. This allows us to establish two key empirical findings: (a) higher FD before the GR was associated with subsequently larger house-price declines, and (b) FD before the CV19 pandemic was associated with more significant earnings losses during it. Overall, this suggests that beyond being a relevant measure of individual vulnerability, the distribution of FD across the United States may help us better understand the aggregate and distributional consequences of the past two recessions because of its relationship between the aggregate shocks that precipitated these downturns.

Starting with the GR, the left panel of Figure 3 shows that home values during this event declined the most in higher FD communities. By 2012, regardless of FD, median home prices declined on average by around 15% relative to their 2006 levels. However, home-price declines in ZIP codes with higher FD were twice that or worse in many cases.

Perhaps worst of all, households hardest hit were not diversified. Specifically, we find that households with high FD also tended to hold a larger share of their net wealth in their homes. This result implies that when losses are measured as a percentage of net wealth, home value losses are more strongly correlated with FD. In other words, the skewed distribution of home-price losses generated an even more heavily skewed distribution of net wealth losses for regions in higher FD. The Internet Appendix A.3 illustrates this relationship.

Much like during the GR, the economic consequences of the CV19 pandemic also appear to be correlated with FD. Some suggestive evidence is in the right panel of Figure 3. This figure shows a strong and consistently positive relationship between FD incidence at the ZIP code level (measured by the incidence of DQ30 in 2018) and the share of workers from those areas employed in leisure and hospitality. A natural conjecture is that income losses among high FD areas may have been more significant than those in low FD areas.

Survey evidence from Bick and Blandin (2021) suggests that individuals in higher FD areas have been more adversely impacted during the CV19 pandemic.[12] Combining our measures of FD at the ZIP code level with survey

of FD (Q5) reported earnings losses of at least 50%. In contrast, the comparable figure for individuals in the lowest FD quintile (Q1) is 15%.

This gap in reporting severe earnings losses between Q1 and Q5 is entirely reflected in the incidence of reporting no earnings losses (or increases). As seen in the right panel of Figure 4, individuals in Q5 have systematically been less likely to report earnings staying the same or increasing. As of December 2020, about 70% of individuals in Q5 report earnings staying the same. In contrast, around 80% of individuals in Q1 reported their earnings staying the same. Overall, these findings suggest that whether looking at employment in contact-sensitive sectors or actual reported losses, the economic burden of the CV19 pandemic appears to have fallen strongest on the most financially vulnerable.

2. A Life-Cycle Model of Housing and FD

As alluded to in the previous section, FD alone may affect the transmission of aggregate shocks into consumption as FD reflects differential access to credit, which leads to differential consumption responses (differences in MPCs). Alternatively, FD may shape the consumption response somewhat mechanically because, as we documented, prior FD was correlated with the severity of aggregate shocks in the previous two recessions. Given that FD is at least partially endogenous, quantifying these two channels requires a model of debt acquisition, debt repayment, and consumption decisions.

2.1 Agents, markets, and debt default

There is a continuum of finitely lived individuals who are risk averse and discount the future exponentially. All individuals face risk of death in each period and survive to the next period with probability ρ_t, where t denotes age. Agents work for a finite number of periods, retire at age W, and die with certainty at age T (conditional on reaching this terminal age). In what follows, n denotes periods left until the last period of life T, and is naturally related to age by the relation $n = T - t$.

All agents are subject to risk in their income y (specified below). Additionally, agents can differ in the rate at which they discount the future. Specifically, a share p_L of the population has a discount factor of β_L, while the remaining share has a discount factor of $\beta_H \geq \beta_L$.[14]

Concerning markets, individuals have (limited) access to credit, and each period choose nondurable consumption c, housing h, mortgages m', and financial assets (or debt) a'. They may choose to obtain housing services through owning a home or renting.

6. Concluding Remarks

Our paper aims to understand how household financial distress (FD) shapes individual and aggregate consumption dynamics after aggregate shocks. FD, defined as whether households are over 30 days delinquent on paying back unsecured debt, can affect consumption because its presence reflects weak balance-sheet health and thus differential access to credit, which is critical when buffering consumption from shocks. However, FD may also affect consumption because, as we documented, exposure to aggregate shocks was correlated with prior FD over the past two recessions.

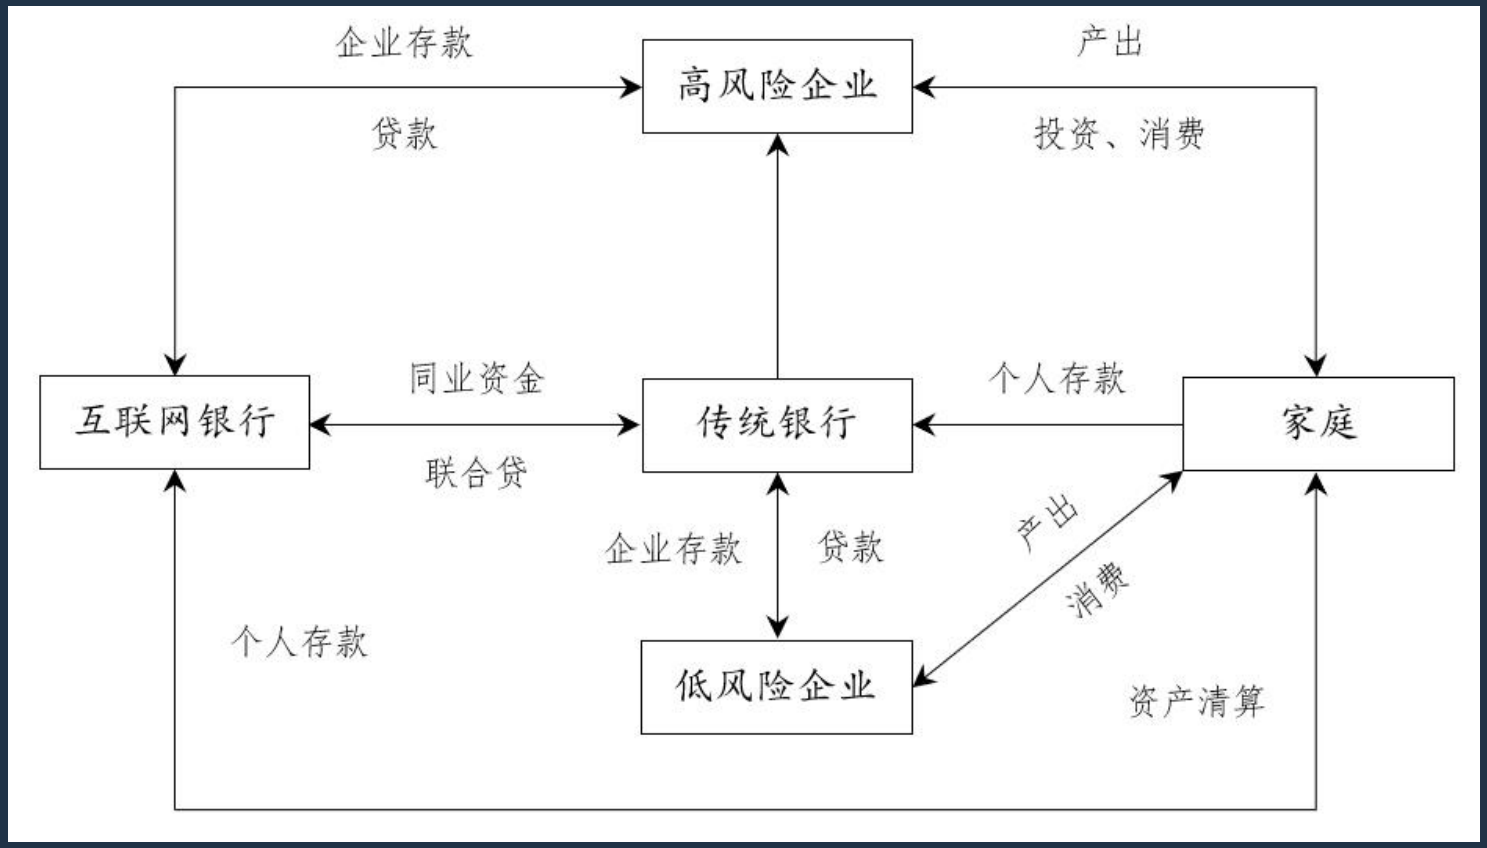

We find that FD *alters* (i.e., either amplifies or attenuates) the response of the aggregate consumption, consumption inequality, and consumption-based poverty by nearly 25%, on average, relative to models that omit FD and only allow borrowing up to a fixed limit. House price shocks are altered more (around 30%), while labor-income shocks are less (around 20%). That prior FD was correlated with aggregate shock exposure matters less for driving these results. Rather, FD matters both because it allows for an additional margin of adjustment when shocks arrive (debt repudiation) and because matching it implies significant ex ante heterogeneity in the population, which translates into wide dispersion in consumption responses (e.g., MPCs).

We also find that modeling FD has important consequences for homeownership. Unlike a model without FD, in a model with FD, unsecured debt prices are endogenous and adjust with ownership status. In particular, debt prices account for the fact that homeowners can extract equity or default on mortgage payments to pay for debt. As a result, borrowing terms are better for homeowners, providing another benefit of homeownership relative to renting. This effect encourages some additional ownership among more financially fragile individuals who otherwise remain as renters in a model without FD. Because these individuals are more likely to default on mortgage payments, overall mortgage default rates are higher in a model with FD compared to one without it.

In terms of future research, our model is very well suited for assessing the impacts of emergency policies enacted during the CV19 pandemic, like mortgage and debt forbearance. Additionally, our model can be used to understand the survey results in Coibion, Gorodnichenko, and Weber (2020) showing that most households used stimulus checks to pay down debt and improve their financial positions. We intend to address these exciting questions in future work.

- 基本事实：数字技术的大规模应用加快了传统银行的存款流动速度，也导致了更为迅猛的挤兑和流动性紧缩。2023年美国银行业危机是很好的例子，3月9日一天内硅谷银行被挤兑超过了400亿美元，约占其总资产的20%，而社交媒体和手机银行是硅谷银行遭受“历史最大规模挤兑”和“破产速度如此之快”的决定性因素。
- 相比而言，2008年金融危机期间，华盛顿互助银行则经历了10天的线下挤兑后才破产，并且被挤出存款仅为167亿美元。互联网银行没有线下网点，完全依靠手机APP等线上手段开展业务，因此其也面临同样的快速挤兑，并可能形成更加严重的流动性紧缩。

- 互联网银行被挤兑有可能通过**同业**拆借、助贷、联合贷等途径，并造成风险传染。2023年中国互联网银行的同业负债占比稳定在20%左右，远高于全国性大型银行的3%和中小银行的6%。而美国互联网银行的同业负债占比却常年低于10%，2020年至2023年维持在3%-4%左右。
- 互联网银行和传统商业银行之间存在着大量的助贷、联合贷，最初联合贷的出资比例为1：9，后来改为3：7，互联网银行提供少部分资金，负责获取借款人，处理贷款申请，并开展贷后管理，而合作的传统银行则提供大部分资金并承担风险，仅联合消费贷巅峰时的最大规模已超过2万亿。当互联网银行出现危机时，较强的同业往来会导致风险传染给传统商业银行。

做“重于事实”的理论和实证研究

- 三个注重：注重研究方法、注重文献阅读、注重调查研究
- 三个事实：历史事实、现实事实、“文献”事实
- 三个维度：完整认识金融世界至少需要三个维度：经济学和金融学的基础理论和基础知识；研究方法；社会实践。

FinTech Credit and Entrepreneurial Growth（JF,2024）

- 基于阿里巴巴在线零售平台淘宝上向商家提供的自动化信贷额度，以及信贷决策算法中的一个断点，研究了金融科技信贷对小微企业成长的影响。研究发现，获得金融科技信贷显著提升了商家的销售增长率、交易增长率以及由产品、服务和物流评分衡量的客户满意度水平。这些效应在那些信用风险信息不对称程度更高、抵押品更少的商家中更为明显，揭示了金融科技信贷相较于传统信贷技术的信息优势。本研究为金融科技在缓解新兴市场信贷摩擦、促进创业增长方面的作用提供了强有力的微观证据。

- 全球范围内，信贷技术正随着新数据源的出现而发生深刻变革。在传统金融体系中，小微企业常因信息不对称和缺乏抵押品面临严峻的信贷约束。金融科技信贷的出现，理论上能缓解这一问题，但缺乏严谨的因果证据。
- 在这一背景下，中国的在线信贷市场呈现爆发式增长，贷款余额从2013年的仅40亿美元激增至2020年估计的7640亿美元。其中，蚂蚁集团等金融科技巨头，利用其生态内（如淘宝平台）产生的海量、实时交易数据，构建自动化信用评级体系，为数以百万计的在线商家提供小额贷款。这为研究一个根本性的问题提供了绝佳的场景：这些新的信贷技术能否释放出传统银行信贷无法触及的潜在创业增长动力？

- 本文旨在系统性地回答以下核心问题：

  因果效应：获得金融科技信贷是否对小企业的销售增长、交易增长和客户满意度具有因果性的促进作用？

  异质性优势：金融科技信贷相较于传统银行信贷的比较优势（特别是信息优势）体现在哪些方面？这种优势是否在信息不对称严重、缺乏抵押品、年轻企业中更为突出？

  市场整合作用：金融科技信贷能否弥补中国因国有银行主导、信贷市场分割而导致的私营部门信贷短缺，从而整合碎片化的信贷市场？

- 主要贡献
- 因果识别与数据创新：本文利用蚂蚁集团信贷审批模型中一个清晰的断点（信用评分480分），通过严谨的因果识别方法，为金融科技信贷能够有效促进企业成长提供了强有力的证据。数据的高频、客观和全覆盖特性，克服了发展经济学文献中常见的小样本、测量误差和选择偏误问题。
- 揭示金融科技的信息优势：研究结果表明，金融科技信贷的积极效应对于那些信贷风险信息不对称性更大、抵押品更少、更年轻的供应商来说尤为显著。这揭示了金融科技信贷依托其能获取并处理的独特实时数据（如销售数据），相比传统信贷技术具有信息优势，能够更好地识别这部分供应商的信用质量，从而实现更精准的信贷投放。
- 实践与政策贡献：为全球范围内正在发生的金融科技革命提供了来自最大新兴经济体的系统证据，揭示了其在促进普惠金融、纠正资源错配方面的巨大潜力，为监管机构的科学决策提供了事实依据。

研究设计

- 模糊断点回归设计（Fuzzy Regression Discontinuity Design, FRDD）。断点来源：蚂蚁集团使用一个基于算法的线性信用评分模型对淘宝商家进行自动化信用评估，信用分是一个连续变量（范围约380-680）。蚂蚁集团设定了一个明确的信贷分配规则：在每月初，如果商家的信用分超过480分，则通常批准其信贷额度。
- “模糊”的成因：信用分超过480并不100%保证获得信贷，也存在未超过480分却获得信贷的情况。这主要是由于两类情况：第一种“No-show” cases：即使分数达标，但因其他硬性标准（如既往违约记录、平台处罚等）被拒绝。第二种，“Cross-over” cases：分数未达标，但因月内信息更新等原因在月内获得了信贷。

- 识别假设与检验
- RDD的有效性依赖于个体无法精确操纵信用分。本文提供了有力证据支持这一假设：商家既不知道评分算法，也无法观测到自己的信用分，因此难以操纵。
- 图1（Panel A） 显示在480分附近，信用分的分布是平滑的，没有出现明显的聚集现象。使用Cattaneo, Jansson, and Ma (2018)的密度检验得到的p值为0.8796，无法拒绝“无操纵”的原假设。

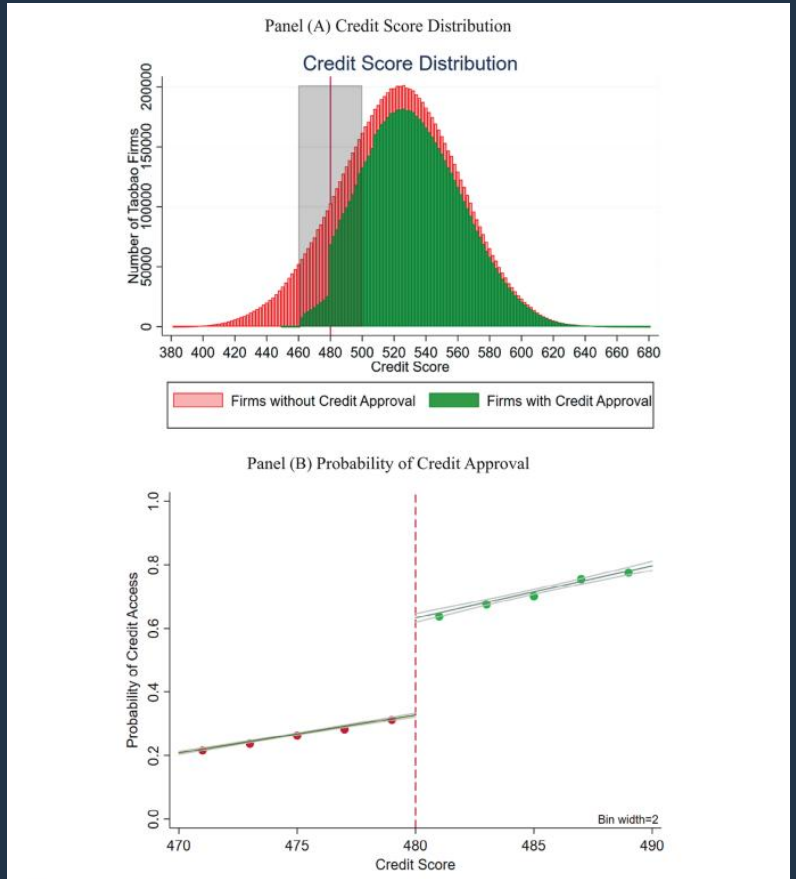

Figure 1. Credit score distribution and credit approval. Panel A plots the distribution of monthly credit scores for 2 million Taobao firms from November 2014 to June 2015. The green bars mark the Taobao firms with credit approval, and the (upper) red bars represent those without credit approval. The gray-shaded region marks the sampling interval for the FRDD with the discontinuity at the credit score of 480. Panel B is the discontinuity plot for the probability of credit approval against credit scores. The vertical axis is the probability of credit access. The horizontal axis is the credit score in the local range of [470, 490]. Each dot on the figure represents the average probability that a credit line is granted to a firm located in the credit score range with a bandwidth of two. The probability is estimated by dividing the total number of firms with credit access by the total number of eligible firms in the same bin. A linear line is fit to the scattered dots on each side of the cutoff score (i.e., 480), surrounded by a 95% confidence interval in light gray lines. (Color figure can be viewed at wileyonlinelibrary.com)

数据与变量

- 数据来源：蚂蚁集团提供的2014年11月至2015年6月期间所有淘宝商家的月度数据。
- 主要样本：为进行FRDD分析，作者将样本限定在信用分位于[460, 500]区间的企业-月度观测值，最终样本量为1,196,887（约120万），涉及547,491家企业。
- 核心解释变量：Credit Approval（是否在t月至t+1月持续获得信贷）。工具变量：IV (Credit Score ≥ 480)。结果变量： 增长指标：Sales Growth（销售增长率）, Transaction Growth（交易增长率）（从t-1月到t+1月的对数差分）。客户资本指标：商品评分, 服务评分）, 寄售供应商评分。机制变量：支出）, 产品种类）, 客户转化率。异质性变量：企业年龄排名，行业销售增长离散度，是否耐用品行业，是否有房产。

- 实证模型：采用两阶段最小二乘法（2SLS）。

第一阶段：用工具变量 IV (Credit Score ≥ 480) 预测真实的信贷批准概率。第二阶段：将预测的信贷批准概率对企业的绩效指标进行回归。由外生规则驱动的信贷批准，如何影响企业后续绩效？

$$Credit\ Approval_{i,t} = \alpha + \rho IV_{i,t} + \sum_{k=1}^{K} \gamma^k S_{i,t}^k + \varphi_j + \varphi_t + \varepsilon_{it}, \quad (1)$$

$$Dep_{i,t+1} = \beta + \tau \widehat{Credit\ Approval}_{i,t} + \sum_{k=1}^{K} \lambda^k S_{i,t}^k + \varphi_j + \varphi_t + \varepsilon_{it}, \quad (2)$$

变量	含义	重要作用
IV_{i,t}	工具变量 = 1(信用评分 ≥ 480)	捕捉在480分处的外生规则变化
ρ	核心系数：衡量跨过480分门槛导致的信贷批准概率的"跳跃"幅度	如果 ρ 显著且足够大，证明工具变量有效
S_{i,t}	标准化后的信用分距离（信用分 − 480）	关键控制变量：控制信用分与企业绩效之间可能存在的平滑线性关系
φ_j，φ_t	企业类型和月度固定效应	控制不可观测的行业特性和时间趋势

- 基准回归结果：控制了其他因素后，在第一阶段仅因为信用评分跨过480分门槛，企业获得信贷批准的概率提高。

Table III

FinTech Credit Access and Firm Performance

This table shows the FRRD estimates of FinTech credit access on firm performance. We use the 2SLS regression system in equations (1) and (2) to implement the design. In the first stage (Panel A), we regress the credit access dummy, *Credit Approval*, on an indicator variable, *IV (Credit Score≥480)*, which equals one when the credit score is equal to or greater than 480, and zero otherwise. In the second stage (Panel B), we regress the dependent variable on the instrumented *Credit Approval*. We use the local linear regression model for the credit scores, which range from 460 to 500, and include firm-type and time fixed effects in both stages. The dependent variables are *Sales Growth* and *Transaction Growth* measured from one month before to one month after the credit allocation event, and *Product Rating*, *Service Rating*, and *Consignment Rating*, measured in the month after the credit allocation event. Firm-type and time fixed effects are included. We report *t*-statistics based on standard errors clustered at the firm-type level in parentheses. The Kleibergen-Paap weak instrument statistic is presented in the last row of Panel B. *, **, and *** denote statistical significance at the 10%, 5%, and 1% level, respectively.

Panel A. First Stage

Dependent Var.	*Credit Approval*
	(1)
IV (Credit Score≥480)	0.2872***
	(27.50)
Polynomials in Credit Score	Yes
Firm Type FE	Yes
Time FE	Yes
N	1,196,887

Panel B. Second Stage

Dependent Var.	*Sales Growth* (1)	*Transaction Growth* (2)	*Product Rating* (3)	*Service Rating* (4)	*Consignment Rating* (5)
Credit Approval	0.3631***	0.2691***	0.0541***	0.0544***	0.0551***
(Instrumented)	(15.97)	(16.31)	(9.17)	(9.62)	(9.90)
Polynomials in Credit Score	Yes	Yes	Yes	Yes	Yes
Firm Type FE	Yes	Yes	Yes	Yes	Yes
Time FE	Yes	Yes	Yes	Yes	Yes
N	1,196,887	1,196,887	1,196,887	1,196,887	1,196,887
Kleibergen-Paap *F*-stat.			756.2		

因变量	系数（CreditApproval）	经济意义
Sales Growth	0.3631***	信贷批准使销售额在两个月内增长
Transaction Growth	0.2691***	交易量增长约
Product Rating	0.0541***	产品评分提升
Service Rating	0.0544***	服务评分提升
Consignment Rating	0.0551***	物流评分提升

金融科技平台公司

- “风险与收益成正比”是现代金融学理论的基本假设之一，然而大数据、云计算、区块链和人 工智能等数字技术在经济领域的应用，促使金融科技平台公司正在对传统金融学理论提出一定的挑战。2017—2019 年，中国短期消费贷款余额由6.8万亿元增长到9.9万亿元，占总消费贷款 比重维持在20%左右，且短期消费贷款占居民消费支出的比重分别为21%、25%和26%，2019年 国内所有平台公司发放的在线消费信贷规模达到6万亿元，占全国短期消费信贷的比重超过了60%。2020年上半年蚂蚁金服的短期消费信贷已达到1.7万亿元，占其贷款总额的80%以上，占国内短期消费贷款余额的21%。
- 但是，该类公司同时也掌握着海量数据，并运用大数据技术识别风险，通过信息垄断逐 步实现市场垄断并主导利率定价权，形成了风险与收益不对称的现象。金融科技平台公司利用不同信息实行差别定价，其向借款人收取的费用比传统银行高出13个基点，而整体的违约风险却低于传统商业银行，导致借款人为消费贷款支付了相当高的溢价。

- 市场垄断和信息垄断导致了“风险与收益不对称”的利率定价现象。根据各平台公司年报数据的不完全统计，2017—2020 年各金融科技平台公司的日贷款利率在0.02%—0.05%，年 化贷款利率为7.2%—18%，而同期市场利率仅为3.91%—4.35%。对比平台与商业银行的短 期消费贷款可以发现，中国建设银行随借随还、按日计息短期贷款产品“快贷”的年化利率仅为 4. 35%，中国工商银行随借随还、按日计息短期贷款产品“融e借”的年化利率也为4.35%， 招商银行和中信银行的短期消费贷款的年化利率分别为4.5%和3.85%。
- 然而，腾讯微粒贷 年化利率高达18.25%，百度“有钱花”年化利率为17.64%，蚂蚁借呗的年化利率为21.9%， 京东白条年化利率甚至超过23%。同样为随借随还、按日计息产品，面对同样的客户，风险相同，但是年化利率有3—4倍的差异。对同一批低信用评分借款者，由于缺少竞争对手而实施高额定价，金融科技贷款的利率要比传统银行贷款利率高出很多。

- 平台拥有高收益，却存在着较低的违约风险。金融科技平台公司运用市场贷款中的软信息、个人社交网络(和教育背景等非传统的数据，提高信用评分的预测能力，从而降低了贷款拖欠率。金融科技贷款使得信用评分低的个人能够获得信贷，违约概率也比信用卡要低。实践中，虽然不同平台公司的逾期率指标迥异，但是大致分为30天、60 天和 90 天。以最具代表性的平台公司为例，2019年其30天贷款逾期率为0.8%—1.2%，60 天贷款逾 期率甚至仅为0.51%—1.24%，即使是90 天贷款逾期率稍高些，也低于商业银行2%左右的贷款逾期率。
- 相较于商业银行，平台的盈利能力要强很多。例如，2019年某平台公司的净资产收益率高达28.15%，招商银行为16.84%，工商银行和建设银行均为15%左右。而且，金融科技平台公司的资金运用成本非常低，风险主要由商业银行承担。例如，某平台公司98%的贷款均已实现资产证券化，而其主要购买者为商业银行。另一平台公司的主要产品为联合贷放贷模式，其 90%以上的资金来源于商业银行。

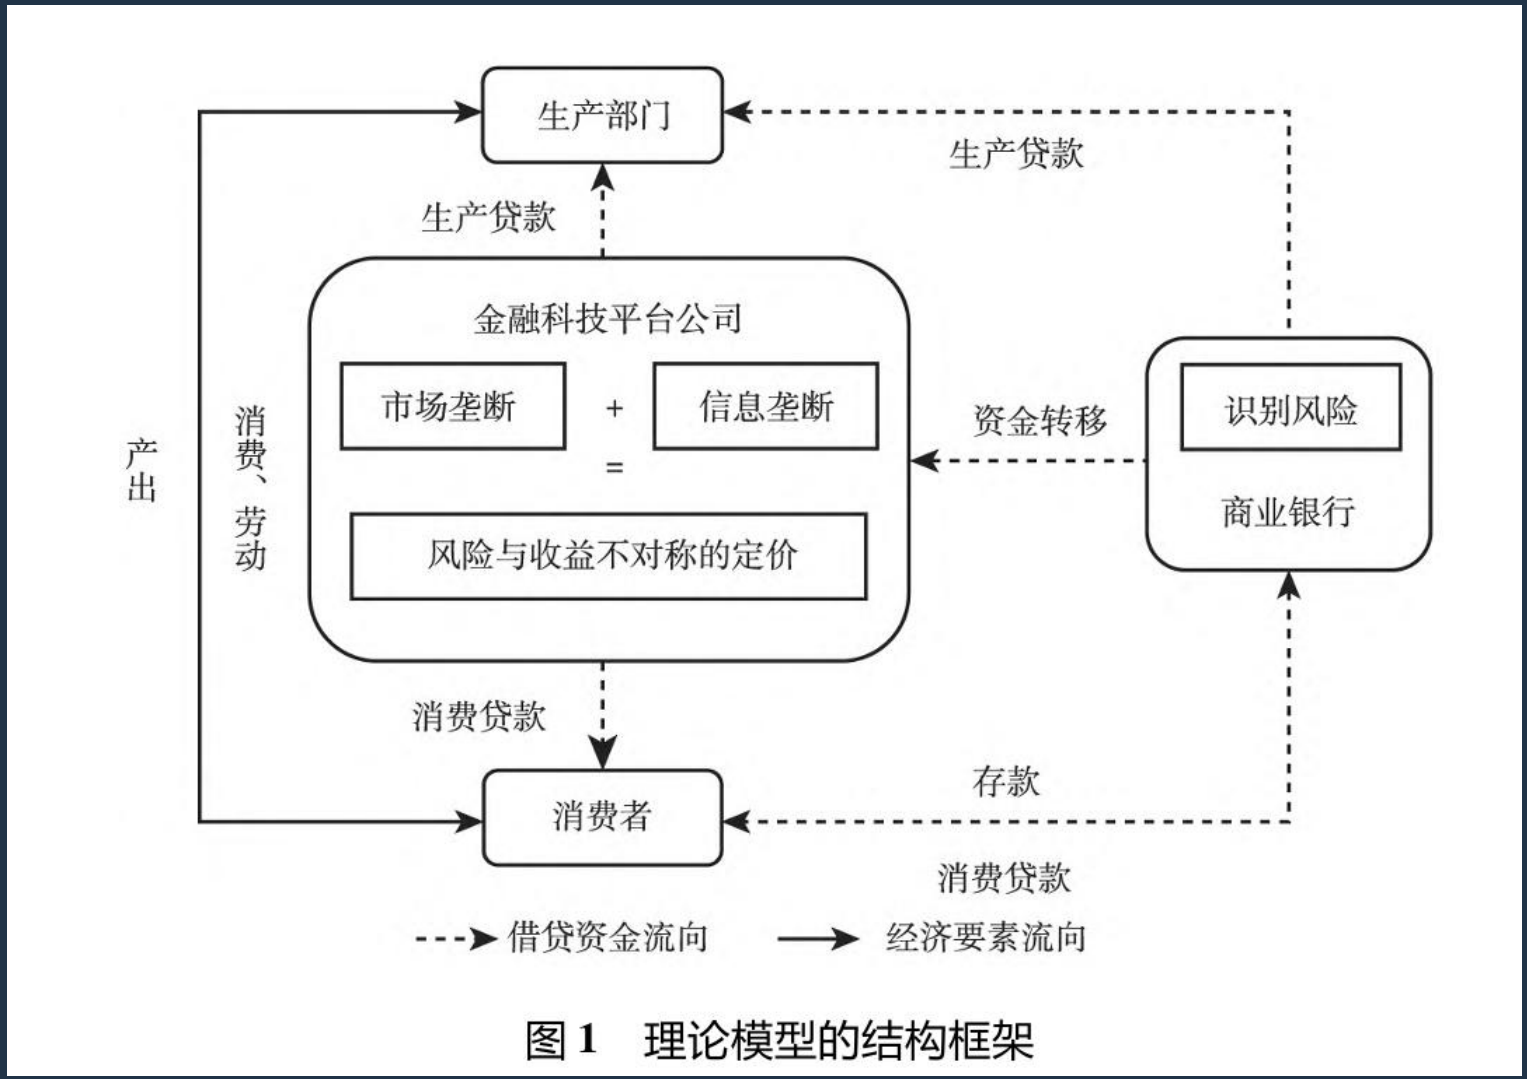

图 1　理论模型的结构框架

第五步 逻辑训练：写理论机制

- 理论机制或理论分析或研究假说：解释X为什么影响Y。两种方式：用数理模型；用逻辑演进分析。
- 一篇学术论文中，大部分的文字（除对经验结果的技术性解释外）是通过浏览文献，引用并总结别人的观点而形成的文字。不需要把自己的大白话放在论文中。
- 一般期刊上文章可以了解，但不能作为证明文章观点的依据，更不能把百度或google里得到的观点作为证明文章观点的依据。

Employment Protection, Investment, and Firm Growth*

John (Jianqiu) Bai
Northeastern University

Douglas Fairhurst
Washington State University

Matthew Serfling
University of Tennessee

We exploit the adoption of U.S. state-level labor protection laws to study the effect of employment protection on corporate investment rates and sales growth. We find that, following the adoption of these laws, capital expenditures as a percentage of book assets decrease, resulting in slower sales growth. Our findings are consistent with theories predicting that greater employment protection discourages investment by making projects more irreversible. Supporting this channel, following negative cash flow shocks, firms are less likely to downsize operations in states that have adopted these laws but more likely to downsize in states that have not adopted these laws. (*JEL* G31, G33, J63, K31)

就业保护、投资与公司增长（RFS，2019）：
美国国家劳动保护法律通过后，公司资本支出占帐面资产的百分比下降，并导致销售增长放缓。

1. Theoretical Motivation and Institutional Background

1.1 Theoretical motivation

Why would greater employment protection affect investment decisions? On one hand, greater employment protection could lead to more investment by either increasing productivity or encouraging investment in relatively cheaper physical capital. Nickell and Layard (1999) and Belot, Boone, and van Ours (2007) suggest that greater employment protection could increase productivity by mitigating holdup problems between firms and employees. In the model of Belot, Boone, and van Ours (2007), workers can invest in noncontractible firm-specific knowledge. Because workers bear the entire cost of exerting effort in learning firm-specific knowledge but only receive a fraction of the gains from such effort, a holdup problem is created and can lead to underinvestment in firm-specific knowledge. Thus, employment protection can encourage workers to accumulate firm-specific human capital by reducing the likelihood of dismissal, which could lead to greater productivity and investment rates.

就业保护使得工人被解雇的概率降低，从而提高人力资本，使得公司生产率提高，投资增加。

On the other hand, greater employment protection could lead to less investment. By making it costlier to discharge workers, greater employment protection potentially makes investments more irreversible, and ample evidence shows a negative relation between investment irreversibility and investment activity (e.g., Bernanke 1983; Pindyck 1991; Bertola and Caballero 1994; Abel and Eberly 1996; Abel et al. 1996). Investments are more irreversible if, once undertaken, they cannot be undone or made into a different project without high costs (Bernanke 1983). In an option-based approach to calculate the net present value (NPV) of an investment, the ability to divest a project at a later point in time creates a put option that increases the NPV of the project, and the value of this put option is increasing in the resale or recovery price from divesting. Consequently, greater investment irreversibility lowers the value of the put option, reducing the NPV of the project and ex ante incentives to invest (Abel et al. 1996).

就业保护提高了解雇工人的成本，增加投资不可逆性，会减低投资净现值和事前激励，因而会使得公司投资降低。

- **理论机制与文献综述**
- 一篇学术论文中，大多数文章中没有“文献综述”部分，而学位论文中一般会有“文献综述”。
- 一篇学术论文中，大多数文章在“引言”里阐述“本文与既有文献的差别或本文的贡献”。
- 理论机制或研究假说中，用现有文献论证机制分析，这些文献与“引言”中提到文献不同
- 不能把理论机制分析写成了“文献综述”

第六步 突出结论意义

- 第一段话：总结文章的大致研究思路，总结文章的实证结果。注意：与摘要内容类似，但不能与摘要内容完全一样。
- 第二段话：得出的实证结果的现实意义是什么？启示或政策含义；对于理论上贡献是什么？

5. Conclusion

The United States has shifted away from the employment at-will rule and toward providing workers with greater employment protection. This paper exploits plausibly exogenous increases in employment protection arising from the adoption of U.S. state-level labor protection laws to examine how greater employment protection affects corporate investment activity and firm growth. We find that the adoption of these laws results in lower investment rates and investment rates that are less sensitive to changes in investment opportunities. In addition, lower investment rates following the adoption of these laws are associated with lower sales growth rates. We also find that, after the law's adoption, firms are less likely to downsize following negative cash flow shocks, and when firms do downsize, they are more likely to downsize operations in states that have not adopted the good faith exception. Collectively, these results are consistent with theories predicting that greater employment protection increases investment irreversibility, which reduces ex ante incentives to invest.

684

Employment Protection, Investment, and Firm Growth

Overall, our paper emphasizes the interdependence of investment policies and growth with labor market frictions and in particular, employment protection. Thus, our study provides insights into how labor regulations, employee adjustment costs, and litigation risk can affect corporate investment and growth.

VIII. Conclusion

The global housing boom of the 2000s, and the Great Recession that followed, demonstrated striking correlations between real estate prices and economic activity.

[47] Just over 25 percent of our firm-year observations occur when the regional house price is falling.

[48] Note that we still require that the firm existed in 2002 and that we can value the real estate of at least one director. We also maintain the same sample selection criteria based on industry, firm type, and not being a subsidiary. We also drop firms with less than £25,000 in *Total Assets* as very small values of *Total Assets* distort the estimates as it is used as the scaling variable. However, firms with less than £25,000 in *Total Assets* only account for 0.2 percent of *Total Assets* across firms so their omission should not affect the interpretation of our results.

[49] For comparison, estimating this regression on the baseline sample results in a coefficient estimate of £0.049. Part of this discrepancy may be due to a scaling issue: the maximal sample contains some very small firms with few assets, and consequently very high values of real estate to total assets. This leads to wide variance of the regressor, compressing the coefficient estimates. For example, if we restrict the maximal sample to firms with at least £100k in assets (firms which account for over 99 percent of aggregate firm assets), the coefficient estimate rises to £0.034.

To explain these phenomena, one strand of literature has focused on how consumption is affected by household balance sheets, estimating a marginal propensity to consume out of housing wealth of 5–7 cents on the dollar. A second strand of literature estimates how investment is affected by corporate balance sheets, finding a marginal propensity to invest out of corporate real estate of 6 cents. This paper uncovers a novel channel at the intersection of these two literatures, finding that the marginal propensity of firms to invest out of their directors' housing wealth is 3 pence on the pound. Our evidence suggests that this effect operates via relaxing collateral constraints.

This residential collateral channel is quantitatively important and has implications for structural models evaluating links from real estate prices to the macroeconomy, as well as optimal policy in light of such a relationship. Failing to recognize that a much greater portion of the collateral used by the corporate sector is tied up in housing, relative to the real estate owned by firms, may lead to an underestimation of the impact of real estate prices on investment. Moreover, this channel intimately links the housing market to the supply side of the economy. This complicates how policymakers, both monetary and macroprudential, should react to fluctuations in real estate prices and, to the extent that policy can influence real estate prices, has implications for the transmission mechanism.

Home Values and Firm Behavior

Article Information

Abstract

The homes of firm owners are an important source of finance for ongoing businesses. We use UK microdata to show that a £1 increase in the value of the homes of a firm's directors increases the firm's investment by £0.03. This effect is concentrated among firms whose directors' homes are valuable relative to the firm's assets, that are financially constrained, and that have directors who are personally highly levered. An aggregation exercise shows that directors' homes are as important as corporate property for collateral driven fluctuations in aggregate investment demand.

货币政策对企业预期的影响*

——基于工业企业微观调查数据的分析

李　力　李学楠　刘晓蕾

内容提要：本文聚焦于货币政策的“稳预期”效果，构建了包含实际摩擦和金融摩擦的动态随机一般均衡模型，探究货币政策对经济主体预期变动的影响，并基于一套独特的工业企业微观调查数据，考察货币政策冲击对微观企业产量预期的具体影响。研究发现：宽松的价格型和数量型货币政策冲击均能推动企业形成积极预期，两者在边际上分别使得企业对于下季度产量形成积极预期的概率增加5.3%和23%左右，且数量型工具“稳预期”的影响比价格型工具更广。在宏观经济景气程度较高以及消费需求扩张的状态下，扩张性货币政策“稳预期”的效果会更加明显。宽松货币政策有利于改善企业的外部融资状况，也会使得企业新增投资的意愿更加积极，进而推动企业形成积极预期。本文的研究表明，适度宽松的货币政策应进一步加大逆周期调控力度，并统筹使用数量和价格两类货币政策工具，多措并举扩大内需，以增强货币政策“稳预期”的效果。

关键词：货币政策　企业预期　微观调查　稳预期　融资状况

发现预期下季度产量增加的企业，在宽松的货币政策冲击下，更可能扩大下季度的生产规模，即经济主体的乐观预期会放大宽松货币政策向实体部门的传导效果。①

四、结论与启示

近年来，中国经济发展面临的内外部不确定性因素显著加大，微观主体的预期不稳、信心不足等问题成为当下社会各界共同关切和讨论的重大议题。2024年9月27日，中国人民银行实施降准降息，下调金融机构存款准备金率0.5个百分点，将公开市场7天期逆回购操作利率下调0.2个百分点，政策利率下调幅度自2021年以来最大。在一揽子增量政策的支持下，社会综合融资成本稳中有降，市场信心持续增强，A股市场连续多日上涨，上证综指成交明显放量，企业和消费者的预期也明显改善。2024年12月，中央经济工作会议明确将我国货币政策的取向由“稳健”调整为“适度宽松”，向社会进一步释放了“稳增长”和“稳预期”的清晰信号。在外部压力加大、内部困难增多的背景下，适度宽松的货币政策不仅是稳定就业和支持经济高质量发展的重要举措，也是稳定公众预期并提振市场信心的重要抓手。

本文聚焦于货币政策的稳预期效果：首先，在纳入实际摩擦和金融摩擦的新凯恩斯动态随机一般均衡模型中通过仿真模拟，从理论层面分析了货币政策对经济主体预期变化的具体影响，并从企业融资状况与投资偏好两个角度探究了背后的传导机制。随后，基于一套独特的微观调查数据库，进一步从微观层面考察了货币政策冲击对企业产量预期的具体影响和影响机理。本文的研究发现：(1) 无论是数量型还是价格型货币政策工具，宽松的货币政策冲击均能显著地增加企业对于下季度产量形成积极预期的概率，且这种影响在不同产权性质和地理区域的企业之间，呈现较为明显的差异性。就辐射的地理范围而言，数量型货币政策比价格型货币政策冲击稳预期的效果更好。(2)相对于国有企业而言，宽松货币政策对于民营企业和外资企业产量预期的影响幅度更大，且财务状况较为困难的企业的产量预期对于扩张性货币政策的反应也更加敏感。在经济景气程度较高、消费需求扩张的状态下，扩张性货币政策稳预期的效果会更加明显。(3)宽松的货币政策会通过改善企业的外部融资状况，使得企业获取银行贷款的概率显著增大，同时还会使企业的投资偏好更加积极，新增投资的意愿增加，进而培育企业对未来产量的乐观预期。此外，在企业的预期较为乐观的情形下，企业的生产也会保持扩张，而企业的乐观预期会进一步放大宽松货币政策向实体部门的传导效果。

本文的研究结论为我国当前提升货币政策的稳预期效果提供了重要的政策启示。第一，党的二十届三中全会通过的《中共中央关于进一步全面深化改革、推进中国式现代化的决定》中提出“健全预期管理机制”。根据本文的研究结论，我国央行应该以适度宽松的货币政策作为稳定社会预期的重要抓手，通过加强政策沟通与预期引导使得市场对于未来的利率路径和货币政策动向形成清晰稳定的预期，尤其是应通过进一步加大货币政策逆周期调控的力度以推动微观经济主体形成经济基本面回升向好的积极预期。2025年，应继续实施有力度的降准降息从而在总量上保障流动性更加充裕，为进一步巩固和强化经济基本面向好的预期创造适宜的货币信贷环境。具体而言，应根据实体经济的流动性情况以及PMI指数、CPI指数和消费者信心指数等经济指标的变动情况，通过2—3次降准降息，使得准备金率下调0.5—1.5个百分点，下调政策利率20—40个基点，引导5年期LPR利率继续下行，并继续对居民房贷实施较大力度的定向降息，引导存量房贷利率进一步下降。

第二，央行实施适度宽松的货币政策在保持总量流动性充裕的情形下，还应该更加注重调控精

① 因篇幅所限，进一步分析的结果详见本刊网站登载的附录5。

https://www.cnki.net

准性和直达性，对于经营压力较大的企业和部分困难行业，应该强化货币政策的精准滴灌功能以持续有效地修复微观主体的预期。2024年12月召开的中央经济工作会议强调，发挥好货币政策工具总量和结构双重功能，适时降准降息，保持流动性充裕。根据本文的研究，对于融资较为困难、现金流状况较差的中小企业和民营企业，应该进一步加大结构性货币政策工具的支持力度(例如，加大支小再贷款的额度、延续普惠小微企业贷款延期还本付息等)，以有效地改善其预期，尤其是对于餐饮、零售等特殊困难行业，应予以优先的再贷款支持以助力企业纾困并提振其发展信心。鉴于本文发现的数量型工具相比价格型工具的稳预期效果更强并且辐射地区范围更广，而价格型工具需要较为成熟的金融市场支持才能发挥良好作用这一研究事实，在金融市场欠发达地区应更加注重数量型货币政策工具的使用。尤其是对于中西部等经济发展水平相对较低地区，应该强化定向降准、再贷款和抵押补充贷款等数量型工具的支持力度，以助力当地的困难企业实现稳预期、强信心。此外，还应充分认识到民营企业和外资企业的预期对于货币政策的高度敏感性，通过创新货币政策工具箱引导金融机构加大对民营小微企业的信贷投放以切实提升民营企业的预期，并稳定和增强外资企业对于中国经济前景的信心。

第三，应该重视需求端在增强货币政策稳预期效果中的重要作用，充分认识到货币政策“稳预期”的作用并非孤立存在，而是需要和有效需求相配合才能发挥其最大效用。2024年7月，党的二十届三中全会提出，增强宏观政策取向一致性。2024年12月，中央经济工作会议强调，要打好政策组合拳，加强财政、货币、就业、产业、区域、贸易、环保、监管等政策和改革开放举措的协调配合。根

信心加速器、宏观经济波动与货币政策有效性*

郭豫媚　郭俊杰

内容提要：科学的宏观调控应当有效提振信心。因此，深刻理解信心在宏观经济波动和货币政策调控中的作用至关重要。本文通过构建一个包含信心、借贷约束和零利率下限的动态随机一般均衡模型，探究了信心对宏观经济波动和货币政策有效性的非线性影响，并给出了应对方案。本文研究发现，信心不足会通过增加预防性储蓄产生与负向需求冲击类似的效果，这使得衰退冲击的负面影响会通过减弱信心而被放大，产生“信心加速器”效应。与此同时，当货币政策力度不足时，“信心加速器”还会弱化甚至完全抵消降息的宽松效果。在基准情形下，“信心加速器”会导致衰退冲击引发的产出下滑幅度扩大27%，货币政策降息25个基点的稳增长效果下降50%。进一步分析表明，“信心加速器”还会导致经济进入零利率下限的风险增加。加大货币政策力度和实施前瞻性指引能够有效减弱“信心加速器”效应，避免零利率下限困境和经济衰退。本文不仅为研究信心问题提供了理论分析框架，从“信心加速器”视角为理解信心在宏观经济中的作用提供了新视角，还为破解“信心加速器”下信心不足和产出缺口为负之间的负向反馈机制提供了新思路，对于实施科学的宏观调控、健全宏观经济治理体系具有重要的理论与现实意义。

关键词：信心加速器　经济波动　零利率下限　政策有效性

七、结论与政策启示

本文通过构建包含信心、借贷约束和零利率下限的动态随机一般均衡模型，提出并论证了“信心加速器”效应及其产生的逻辑机理，为货币政策如何提振信心提出了政策建议，主要得到以下结论：第一，悲观信心冲击会产生与负向需求冲击相似的结果，导致总产出和物价水平下行。这种影响来源于集约效应和广延效应。一方面，悲观信心使得家庭产生未来收入下降的预期，未来借贷约束收紧的可能性上升，从而使得家庭增加储蓄、减少消费，即集约效应。另一方面，在面临低收入冲击的家庭中，借贷约束收紧的家庭会由于对未来的悲观预期而增加储蓄，使得经济中储蓄的家庭数量变多，从而挤出消费，即广延效应。第二，信心会放大宏观经济波动，存在“信心加速器”效应。在本文基准情形下，信心机制的存在会导致衰退冲击带来的总产出、劳动时间和工资下降幅度增加30%左右，本文将信心放大宏观经济波动的这种效应称为“信心加速器”。“信心加速器”产生的原因在于，衰退冲击所导致的产出下滑会使得信心变弱，从而进一步削弱家庭的消费需求，加剧经济下行压力。第三，在货币政策力度不足的情况下，“信心加速器”会显著削弱货币政策效果。在基准情形下，“信心加速器”会使得货币政策降息25个基点的稳增长效果下降50%。其原因在于，“信心加速器”会使得通胀下降，从而抵消货币政策降息效果，甚至导致实际利率上升。第四，“信心加速器”会使经济更容易触发零利率下限，导致经济面临长期衰退。在包含“信心加速器”时，2倍基准情形下的衰退冲击就会触发零利率下限，而在不包含“信心加速器”时，需要5倍基准情形下的衰退冲击才会触发零利率下限。不仅如此，5倍基准情形下的衰退冲击在不包含“信心加速器”模型中，仅触发1个季度的零利率下限，而在包含“信心加速器”的模型中，零利率下限约束收紧的时期会长达6个季度。第五，通过及时加大货币政策力度和实施前瞻性指引，有助于避免经济进入零利率下限和促进经济复苏。

党的二十届三中全会通过的《决定》在“健全宏观经济治理体系”一节指明了科学的宏观调控的重大意义。本文研究表明，能否提振信心是反映宏观调控科学性的重要方面。为构建能够有力提振信心、有效稳定增长的科学宏观调控，本文提出如下三点政策建议。

第一，经济下行过程中如果同时伴随信心的下滑，那么货币政策有必要加大调控力度。宏观政策“三策合一”理论认为，政策力度的设定要兼顾长期和短期（陈彦斌，2022），短期内的力度不足可能在长期中产生持续的增长乏力现象，从而导致长期中不得不加大政策力度。最终，从整体上来看，不仅政策空间会丧失，而且政策效果不佳，有限的政策空间没有得到充分利用。本文研究发现，如果货币政策力度不足，“信心加速器”会导致较大幅度的通胀下降，从而导致实际利率上升，反而使宽松货币政策产生紧缩效果，浪费政策空间。不仅如此，由于“信心加速器”的作用，宏观经济的波动会加大，从而更容易触发零利率下限，货币政策效果和空间均受到更大挑战。但是，如果在经济下行初期就加大宽松货币政策力度，则能够更大程度上稳定产出并同时稳定住信心，避免“信心加速器”的负向反馈作用。这不仅能够提高货币政策有效性、节省货币政策空间，而且能够有效地避免经济陷入零利率下限后所面临的货币政策空间丧失、“信心加速器”效应持续放大负向冲击的难题。

CEO Behavior and Firm Performance

I. Introduction

CEOs are at the core of many academic and policy debates. The conventional wisdom, backed by a growing body of empirical evidence (Bertrand and Schoar 2003; Bennedsen et al. 2007; Kaplan, Klebanov, and Sorensen 2012), is that the identity of the CEO matters for firm performance. This raises the question of what CEOs do and how differences in CEO behavior relate to differences in firm performance.

Scholars have approached these questions in two ways. At one end of the spectrum, Mintzberg (1973) and similar studies measure actual behavior by "shadowing" CEOs in real time through personal observation. These exercises produce a rich description of executives' jobs, but they are not amenable to systematic statistical analysis, as they are based on small samples.[1] At the other end of the spectrum, organizational economists have developed abstract categorizations of leadership styles that, however, are difficult to map into empirical proxies of behavior (Hermalin 1998, 2007; Dessein and Santos 2016).[2]

This paper develops a new methodology to scale up the shadowing methods to large samples, thereby combining richness of detail with statistical analysis. This presents two challenges: (1) how to shadow a large number of CEOs and (2) how to aggregate granular information on their activities into a summary measure that has a consistent meaning across subjects.

第七步 引言要“吸引眼球”

- 引言需要告诉读者，文章做什么，以及为什么要研究这个问题？需要突出研究的重要性，创新性或贡献。
- **第一段话**：强调研究的重要性。需要解决什么问题。该项研究能够解决或回答什么重要问题，或者是学术问题，或者是实践问题，或者是政策问题。。。

Critics of employment protection contend that it stifles corporate investment and growth.[1] Empirical work, however, does not find a consistent relation between employment protection and capital expenditures (Autor, Kerr, and Kugler 2007; Calcagnini, Giombini, and Saltari 2009; Calcagnini, Ferrando, and Giombini 2014). Moreover, even if greater employment protection lowers

*We thank David Denis (editor) and two anonymous referees for their helpful comments and guidance. We are also grateful for helpful suggestions from Andras Danis (discussant), Mihai Ion, J. Nicole Boyson, Rajesh Aggarwal, Scott Judd, Sandy Klasa, Lukas Roth (discussant), Sarah Shaikh, Xiaofei Xing (discussant), and Zhengyi Zhang (discussant); conference participants at the 2014 European Finance Association annual meeting, the 2015 Financial Management Association annual meeting, the 2016 Eastern Finance Association annual meeting, and the 2017 SFS Cavalcade; and seminar participants at the University of Tennessee and Washington State University. We are also grateful to Feiwei Chen, Haosi Chen, and Yoonsoo Nam for excellent research assistance. Any opinions and conclusions expressed herein are those of the authors and do not necessarily represent the views of the U.S. Census Bureau. All results have been reviewed to ensure that no confidential information is disclosed. All errors and omissions are our own. Supplementary data can be found on *The Review of Financial Studies* Web site. Send correspondence to Matthew Serfling, University of Tennessee, 427 Stokely Management Center, 916 Volunteer Blvd, Knoxville, TN 37966-0540; telephone: 865-974-3216. E-mail: mserflin@utk.edu.

capital expenditures, prior work finds that it leads to more innovation (Acharya, Baghai, and Subramanian 2014; Griffith and Macartney 2014). Thus, the overall effect of employment protection on firm growth is unclear. In this study, we examine the relation between employment protection and both U.S. firm-level capital expenditures and sales growth.

引言里如何提问题很重要

- 因变量为城乡收入差距，自变量为数字普惠金融
- 一种提问题方式：影响城乡收入差距的因素很多，而本文从数字普惠金融的角度研究。
- 第二种提问题的方式：文献和实践中关于数字普惠金融的影响和存在价值产生了分歧，而本文利用独特的数据试图回答该问题。

The Death of a Regulator: Strict Supervision, Bank Lending, and Business Activity（JFE，2024）

- 问题提出: 已有研究认为，更严格的监管能通过强制确认贷款损失和资本充足率发挥作用，但可能导致银行信贷紧缩。严监管是否能成为银行深层次管理变革的催化剂，纠正银行管理和贷款实践中的缺陷，从而增加小企业贷款，更好地服务实体经济，推动当地企业活动更具活力？。严监管的管理改革渠道和监管偏好渠道在现有研究中尚未被关注。
- **核心变量**
  - X: OTS*Post，其中OTS为银行之前是否被OTS（The Office of Thrift Supervision储蓄机构监管署）监管，Post为时间是否在2011年7月OTS被撤销之后。
  - Y: 2005-2015年商业银行和储蓄银行的贷款损失拨备率、不良贷款率、核销率；是否接受过监管执法、监管执法文件内容；董事会更替、高管离职；小企业贷款总额；非利息支出、全职员工人数、营收、ROA等；企业进入和退出情况。

- **主要结论**
- OTS转向OCC（美国货币监理署），thrift Banks面临更严格的监管，短期内导致更高的贷款损失确认和不良贷款率。更严格的监管也推动了原OTS银行深远的管理变革，监管执法行动中在信贷管理和银行治理领域提出了更多要求。
- OTS撤销后的严监管通过银行信贷管理渠道和监管偏好渠道促使原OTS银行增加了小企业贷款。OTS撤销后的严监管推动原OTS银行增加非利息支出，提升营业收入，总利润不变，风险承担水平长期内与商业银行趋同。
- 管理系统和人力资本的投资使得原OTS银行能在不增加风险承担的情况下扩张高收益的小企业贷款。小企业贷款不是发放给陷入困境的现有小企业，而是更多提供给新进入企业，促进了当地企业的进入和退出。

- 引言里需要提到文章的贡献或创新点。不要用过于夸张的语言，适度描述文章的贡献，贡献点不能写太多。
- 例如，首次在文献中…，补充了现有文献…，与既有文献不同的是…，

Overall, our study contributes to corporate finance research on the determinants of firms' investment decisions. A predominant stream of research studies how financial frictions affect investment outcomes (e.g., Fazzari, Hubbard, and Petersen 1988; Whited 1992; Kaplan and Zingales 1997; Rauh 2006; Almeida and Campello 2007; Gan 2007; Duchin, Ozbas, and Sensoy 2010; Campello et al. 2011, among others). Our study adds to this work by providing evidence that labor market frictions in the form of employment protection affect real outcomes, such as capital allocation and growth.

We also contribute to work showing that employment laws can have a substantial effect on various corporate policies and valuation (e.g., Matsa 2010; Garmaise 2011; Acharya, Baghai, and Subramanian 2014; Griffith and Macartney 2014; Simintzi, Vig, and Volpin 2015; Serfling 2016; Loderer, Waelchli, and Zeller 2017). By documenting that employment protection laws shape real investment decisions, our study provides further support for the

Last, our findings provide insights for policy makers regarding the net societal effect of increasing employment protection. Undoubtedly, employment protection laws benefit workers by protecting them from unexpected or unfair dismissal practices despite adequate performance. Our findings suggest that these benefits should be considered in conjunction with the potential costs of slower economic growth resulting from reduced investment rates.

本文的主要贡献在两方面：首先，首次用公司融资目的的转变衡量信贷供给周期的影响，结合公司层面的微观数据，更直接地反映信贷周期的实际影响，进而考察货币政策的传导效果。正如Diaz & Olivero(2010)强调，标准的银行信贷传递渠道模型不能预测货币政策冲击对异质性借款人的不同影响，而基于公司层面的数据(即考虑公司异质性)能较好地解决该问题。其次，将公司融

53

2020 China Academic Journal Electronic Publishing House. All rights reserved. http://www.cnki.net

资目的转变纳入到货币政策传导渠道分析中，为"银行信贷渠道"(Bernanke & Blinder, 1988)提供了更直接的微观证据，进而丰富该领域的研究。既有货币政策传导渠道与效果的相关文献中，着重研究货币政策变化对银行信贷量和风险承担的影响以及对公司信贷可获得性的影响，但缺少从公司融资目的转变角度的分析。

本文第二部分为文献与研究假说；第三部分为研究设计；第四部分是数据和变量说明；第五部分为经验结果；最后为总结性评论。

- 创新点要明确“**新在什么地方**”，有什么新意。
- 先用一句话说明文章的新意，然后再展开。例如，与既有文献相比，本文在研究方法上有一定新意。

第八步 摘要要“简明扼要”

- 学术论文摘要的基本要素：第1句话突出问题的重要性。第2句话介绍文章的基本思路。第3句话为结论（最好用数字或分号）。第4句话为结论的意义。

ARTICLE INFO

Dataset link: Replication Package for "Do Bank CEOs Learn from Banking Crises?" (Reference data)

JEL classification:
G21
G32
G41

Keywords:
Bank risk management
Bank CEOs

ABSTRACT

Does the early-career exposure of bank CEOs to the 1980s savings and loans (S&L) crisis affect the outcomes of banks they subsequently managed? We measure the S&L crisis exposure by the bank failure rate in the states where CEOs worked during the S&L crisis. Armed with this measure, we find that banks managed by CEOs with higher S&L crisis exposure took on less risk and that these banks better survived the financial crisis of 2008. In particular, CEOs adjusted risk attitudes in areas causing the S&L crisis: their more intense crisis experience reduced banks' interest rate risk, exposure to risky financial innovation and credit risk. We establish the causal interpretation of the findings by evaluating the impact of crisis exposure via CEO hometown states and exploiting quasi-exogenous turnovers due to CEO retirement. Overall, CEOs learned from the past industry crisis which helped curtail their institutions' risk exposures and enhance later crisis performance.

- 银行CEO在职业生涯早期接触20世纪80年代的储贷危机会影响他们随后管理的银行的表现？。该文发现，S&L危机期间，在银行倒闭率较高的州工作过的CEO，其管理的银行在2008年金融危机中表现更好，风险更低。他们通过调整风险态度，减少了银行的利率风险、高风险金融创新和信贷风险暴露。这种危机经历帮助他们在后来的危机中更好地管理风险。

中国商品市场名义价格粘性的测度*

金雪军　黄　滕　祝　宇

内容提要：本文利用网络文本提取与挖掘技术，构建超过 15 亿条观测的产品级高频数据集，对中国商品市场 2010 年 12 月至 2013 年 2 月间名义价格粘性程度进行估算。结果表明：(1) 相对于发达国家，我国的价格粘性程度处于较低水平，总体价格变化的加权中位数频率是每天 1.23%，总体价格持续时间中值为 2.7 个月，剔除促销的影响后，价格持续时间中值增加到 3.4 个月。(2) 划分子样本分析发现，东部地区和中部地区价格粘性程度比较接近且均高于西部地区，进口品和成交量排名前 20 零售商的商品价格更为灵活。(3) 价格调整幅度的分布呈双峰形态，与状态相关定价模型的预测一致，意味着中国商品市场企业定价存在一定程度的“选择效应”。(4) 通货膨胀方差分解发现，集约边际解释了通货膨胀方差的 64%，表明中国通货膨胀主要来源于商品价格变化幅度的扩张。本文的研究为构建更具微观基础的宏观经济模型提供了新的经验证据。

关键词：价格粘性　时间相关定价　状态相关定价　集约边际　扩展边际

由于研究商品市场名义价格粘性的问题需要大样本微观数据，而我国的官方 CPI 价格数据难以获取，导致这方面的研究一直无法展开。现有研究中，渠慎宁等 (2012) 利用国家发改委价格监测中心收集的 116 种商品和服务的微观价格数据，对居民消费价格的波动、价格粘性和定价模式进行了经验研究，为中国商品市场厂商定价行为与市场化程度分析提供了较为深刻的洞见。蔡晓陈 (2012) 以隐含的季度 GDP 缩减指数作为价格指数度量指标估计了 1992—2012 年的中国价格粘性程度，发现价格平均持续时间为 3.4—8.1 个月。但由于宏观数据的一些固有缺陷，比如在指数生成过程中会损失许多有用信息，通常会导致估计结果有较大偏差，因此，近年来鲜有文献采用宏观数据进行价格粘性的测度。与既有研究不同，本文介绍了一种新的数据来源，利用 Web 数据挖掘技术，收集来自互联网的 350 万种商品的连续价格数据，构建超过 15 亿条观测的产品层面数据库，首次利用大样本微观数据完成中国商品市场名义价格粘性的测度并识别总量价格调整模式，为今后构建更具微观基础的宏观经济模型提供了较为准确的经验研究证据。

中国信贷供给周期的实际效果:基于公司层面的经验证据*

王义中　陈丽芳　宋　敏

内容提要:信贷供给周期先影响公司融资目的,然后影响公司融资方式选择。本文以公司融资目的从长期资金需求到流动性资金需求的转变衡量信贷供给周期的影响,运用中国上市公司季度报表数据进行实证分析。经验研究发现,信贷供给周期会显著影响公司在流动性资金需求与长期资金需求之间的替代性选择,信贷紧缩会促使公司增加流动性资金需求而降低长期资金需求,反之亦然。而且,这种替代性选择会影响公司的投资行为,促使公司减少新增投资。该结论不仅突出了信贷供给周期的重要性,更强调需求层面的因素在货币政策传导中的作用。因此,注重信贷供给的节奏与信贷能力的变化比仅注重信贷投放的规模更重要,应依据微观经济主体融资目的调整信贷供给政策。

关键词:信贷供给　融资需求　公司投资　货币政策

一、引　言

根据货币主义的观点,银行危机影响到实体经济是因为银行减少信贷供给,只要中央银行保持一定货币供给数量,金融中介的破产不会威胁总体经济。然而,美国"次贷"危机中金融机构破产对实体经济产生的较大负向影响对这一观点提出了挑战(Woodford,2010),促使越来越多的研究将金融中介和信贷市场摩擦纳入到主流宏观经济模型中(Caballero,2010;张晓晶,2009)。这种"新宏观经济理论模型"揭示出,金融冲击会对实体经济产生较大影响(Jermann & Quadrini,2012;王国静、田国强,2014),信贷冲击(或约束)会影响公司抵押资产价值和融资能力,进而影响公司的投资行为(Bernanke & Gertler,1989;Kiyotaki & Moore,1997),会放大基本面冲击,而且会导致自我实现的经济周期(Liu & Wang,2014),进而导致全要素生产率下滑(Khan & Thomas,2013;Miao & Wang,2012)。

在经验研究层面,大部分文献将信贷冲击作为"离散事件",比较金融危机前后的冲击效应。Helbling et al.(2011)检验信贷市场冲击的宏观效果,发现在金融危机期间,信贷冲击会对实体经济产生重要影响。Greenstone & Mas(2012)发现"次贷"危机期间,信贷供给周期导致小企业的雇佣和实际工资下降,而危机之前这一关系并不明显。同样,Chodorow-Reich(2014)的研究表明,雷曼兄弟破产后,信贷市场的收缩是导致小企业和中等规模的雇佣下降的原因。还有研究发现在经济紧缩期,银行贷款可获得性显著影响公司的投资行为(Gaiotti,2013)。

另一类文献将信贷冲击作为"连续事件",考察整个时间序列内信贷供给变化的影响。Bassett et al.(2014)以贷款标准变化作为信贷供给冲击指标,得到的结论是,紧缩性信贷供给冲击会导致产出下滑以及企业和居民从银行获得借贷的能力下降。Becker & Ivashina(2014)结合时间序列与微观面板数据,考察信贷供给周期对公司融资方式选择的影响。他们运用美国上市公司季度报表数据,以公司融资从银行贷款到发行债券的转变衡量银行信贷供给紧缩,其经验结果显示,紧缩性货币政策、较差的银行绩效等信贷供给周期,会导致公司在不同融资方式之间的替代(即贷款与债券融资之间的替代性选择)。

然而,无论公司选择何种融资方式,但公司通过不同融资方式获得的资金用途只有一个(少数情况下,也会同时出现两种用途)。例如,公司通过银行贷款或者发行债券,真实目的可能都是为了缓解公司内部的现金流短缺问题。信贷供给周期直接影响公司融资目的——面对冲击是缓解流动性约束,还是扩大生产规模继续投资。其次,公司再考虑融资方式选择问题——要解决流动性问题或扩大规模是通过银行贷款,还是发行债券,或者在股票市场融资等。因此,考察公司融资需求的目的能够直接检验信贷供给周期影响的实际效果。

更重要的是,货币政策的目标之一是影响总需求,尤其是资本投资(Morck et al.,2013),而融资需求目的转变能够体现公司投资行为的变化,进而反映出货币政策的传导效果。例如,如果紧缩性信贷供给下,公司融资需求从扩大投资转为补充流动性,从而降低公司投资需求,紧缩性货币政策在起作用。此时,实施旨在影响信贷数量和可获得性的货币政策比直接影响公司投资的调整利率的货币政策更有效(Madsen & Carrington,2012)。进一步,若宏观经济出现较大的负向冲击(或不确定性),即使实行扩张性的信贷供给政策,公司可能将获得的资金用于缓解内部流动性以应对不确定性而减少长期资金需求,使得扩张性货币政策对公司投资只能起较小的影响(Bloom,2009;王义中、宋敏,2014)。

从国内研究来看,许多研究已经表明,信贷冲击(或约束)是中国经济波动的一个重要传导中介(赵振全等,2007;陈晓光、张宇麟,2010;许伟、陈斌开,2009)。范从来等(2012)发现短期贷款会促进经济增长,但会形成通货膨胀压力,而中长期贷款对经济增长有长期的促进作用,且对通货膨胀有一定的抑制作用。马勇等(2009)得到的结果是,信贷扩张程度的加大显著增加了各种危机(银行危机、金融危机等)的发生概率,扩张越大的国家,一旦发生金融危机,其实体经济受到的负面冲击也将越大。李连发、辛晓岱(2012)认为银行贷款损失推断偏差会引起信贷扩张,而信贷扩张会导致产出缺口扩大。但是,张军(2006)发现,整体来看,中国信贷增长对经济增长的影响不显著,主要原因在于更多信贷资金分配给了低效率的国有企业,而非国有企业获得的银行信贷才能显著促进经济增长和生产率增长。陈昆亭等(2011)发现"次贷"危机后,中国信贷周期与产出变化出现背离的阶段性特征。这些研究仅关注信贷供给在宏观经济层面的影响,而本文将考察信贷供给对微观层面的公司行为的直接影响。

本文与 Becker & Ivashina(2014)最为接近,他们基于公司融资方式选择,而本文从公司融资需求的用途角度,检验信贷供给周期的影响。但是,从公司融资需求的用途角度展开研究,需要假定金融机构没有受到负向经济冲击影响而破产倒闭,即能够保证信贷供给的连续性和可获得性。例如,美国"次贷"危机导致众多银行机构受到冲击,资产缩水,股票价格大幅度下滑,发放给公司的贷款大规模减少,此时即使公司有信贷融资需求,也难以得到银行的信贷支持。正如 Deng et al.(2011)以及 Morck et al.(2013)的结论,中国国有银行和国有企业体系保证了"次贷"危机期间的宏观经济刺激政策(财政政策)的有效性。因此,从公司融资需求出发(或公司融资目的转变)研究信贷供给周期实际效果,中国是最好的实验样本。

本文的主要贡献在两方面:首先,首次用公司融资目的的转变衡量信贷供给周期的影响,结合

如何写学位论文的摘要

- 摘要写三段话
- 第一段话:研究的重要性、研究问题等
- 第二段话：研究思路、方法、结论。结论要明确。例如，得到的结论是：（1）….；（2）…；（3）
- 第三段话：得到结论的意义。例如，由上述结论得到的启示是…….。本文的主要创新点是….

第九步 格式和其他

- 写学术论文过程中应注意问题
- 一篇学术论文中，大部分的文字（除对经验结果的技术性解释外）是通过浏览文献，引用并总结别人的观点而形成的文字。不需要把自己的大白话放在论文中。
- 看文献，总结文献观点，并建立不同文献之间的联系，并加上引用，附在参考文献里。这就是规范的、严肃的学术研究,也是逻辑思维能力不断建立的过程。
- 一般期刊上文章可以了解，但不能作为证明文章观点的依据，更不能把百度或google里得到的观点作为证明文章观点的依据。

- 不能复制、粘贴别人文章或者网络上的内容，更不能将这些内容放在学术论文中。否则，就是学术不端。
- 写学术论文过程中，除几篇核心文章需要精读外，其他文献不需要精读。
- 对于计量模型要搞清楚，“什么时候用+该怎么用”。“什么时候用”指这个计量模型适用于做什么样的经济问题，什么样的数据类型；“怎么用”指这个计量模型如何在软件里实现，并能解读结果含义。

格式一定要规范

- 图、表尽可能不跨页
- 符号级别别弄错
- 公式最好用Math Type编辑器
- 图、表尽可能多，图表里的*号不要跨行
- 参考文献的格式一定要规范，尽可能引用权威文献
- 描述性统计不要出现低级错误
- 内生性问题要考虑
- 实证结果的合理性和一致性
